Wanted: people for the UK car industry

THE BRITISH AUTOMOTIVE industry is in rude health, turning over a record £69.5 billion last year, according to the Society of Motor Manufacturers and Traders (SMMT).

That represents an increase of 6.6% compared with the previous year, and it means that the average worker in our industry is generating a whopping £440,000 per year. This was driven by increased manufacturing output and growth in vehicle sales and exports.

That's all well and good, but the one thing lacking in the industry is sufficient people.

Such is the rate of growth that there is a serious skills shortage among manufacturers and suppliers, and it has the potential to cut off the success story in its prime.

The UK is well placed to capitalise on growing areas of the industry such as autonomous cars and hybrid technology, but to do so it needs bright talent in every area of the industry, particularly in engineering.

It's the one dark cloud in an otherwise vibrant picture.

Mini forges ahead wi

■ Plans for Superleggera roadster include 216bhp, AWD plug-in hybrid ■ John Cooper Works

Mini is pursuing plans for a new flagship roadster after what company insiders describe as an overwhelming response to its Superleggera concept, first revealed at the 2014 Concorso d'Eleganza Villa d'Este in Italy.

The new two-seater is intended as a direct rival to the new Mazda MX-5. It is likely to form part of a future five-pillar Mini line-up, as an offshoot of the Cabriolet model, and has been conceived to use a range of powerplants. These include a new petrol-electric plug-in hybrid system that provides the basis for a 216bhp four-wheel-drive variant.

Speaking about plans to progress the Superleggera towards production, Mini boss

Peter Schwarzenbauer said: "The interest was tremendous when we showed this concept car. We are now working hard to get it on the street. It's an economically challenging project and there is no firm decision, but we have a lot of people here that are fighting for it. I think it would be extremely good for the brand."

The basis for the new Mini roadster is the short-wheelbase UKL platform of parent company BMW. This platform is also used by the current Mini hatchback. The versatile structure is described as being highly suitable for an open-top car because of its rigidity and low weight.

Unlike the rear-wheel-drive MX-5, the Superleggera is

planned to be offered natively with front-wheel drive. The option of four-wheel drive is likely to be available for more powerful versions.

Schwarzenbauer insists the Superleggera is not seen inside the company as a replacement for the existing Coupé and Roadster models. "They don't compare. The Superleggera is a serious sports car," he said.

Power is expected to come from a range of three-cylinder and four-cylinder petrol and diesel powerplants, all of which are used in other Minis. Ranging from 1.5 to 2.0 litres, they are likely to offer between 134bhp in an entry-level Cooper model and 227bhp in a John Cooper Works variant.

The plan to provide the new

roadster with a hybrid option has led one Mini official to describe the new roadster as a junior BMW i8. The official said: "The system is quite similar, although it has been turned 180deg to site the combustion engine at the front and the electric motor at the rear. It also provides the scope for on-demand four-wheel drive and electric drive up to 50mph."

This new hybrid system will appear first on BMW's 2

Series Active Tourer (driven on p26). It uses a front-mounted turbocharged 1.5-litre petrol engine developing 134bhp and 162lb ft and a rear-mounted electric motor with 87bhp and 122lb ft. All up, it has a total system output of 216bhp and 209lb ft of torque.

In the 2 Series Active Tourer, drive is channelled from the combustion engine to the front wheels through a six-speed automatic gearbox.

'The hybrid system provides the scope for 4WD and electric drive up to 50mph'

Superleggera will retain traditional roadster proportions

th new MX-5 rival

version to get 227bhp ■ Due in 2019

The electric motor transfers its power to the rear wheels via a twin-speed gearbox also mounted at the rear in a layout that provides a distinct rearward weight bias.

Energy for the electric motor is provided by a relatively small 7.7kWh lithium ion battery that is also sited at the rear.

The first Mini to feature the new hybrid system will be the second-generation Countryman, due in the second half of 2017. It is expected to be followed by the Superleggera roadster in 2019.

Stylistically, the new Mini roadster is expected to lean heavily on the Superleggera concept car. Both longer and wider than the existing version, it has classic roadster

proportions with a long-by-Mini-standards nose, a two-seat cabin set well back within the wheelbase and a minimal rear overhang.

Overall, the body is more heavily structured than that of existing Mini models. Prominent elements include a defined shoulder, distinct swage line and an abruptly curtailed rear end.

Plans to base the production version of the Superleggera around the UKL platform suggest it could be produced on the same production line as the hatchback at Mini's Cowley plant in the UK.

Design drawings for the original concept car provide the starting point for a production Superleggera

Mini plans 'authentic SUV'

Rugged Countryman replacement to join new Clubman and Cabriolet in Mini line-up by late next year

Two more new Mini bodystyles are on the near horizon, following the unveiling of the new Clubman earlier this month.

Later this year the all-new Cabriolet, codenamed F57, will be revealed. It remains a four-seater, keeps the familiar two-stage folding fabric roof and is expected in showrooms by early spring next year.

After that, the next all-new Mini will be the replacement for the Countryman. Sources at parent company BMW say the new Countryman will be an "authentic SUV". It is expected to go on sale in the final quarter of next year.

The second-generation Countryman is expected to be more rugged than the current model, taking some cues from the Mini X-Raid, which has won the Dakar Rally four times since 2012.

The Countryman will be based on the same UKL architecture as the Clubman, so the new model, codenamed F60, will be significantly more spacious than its predecessor.

It's expected to be just over 4.25m long (a stretch of 150mm) and at least 10mm wider than the current Countryman. The boot will also be noticeably bigger than the current 450 litres.

The new Countryman will be offered with the same four-wheel drive system as BMW's 2 Series Active Tourer.

Although the original Countryman, launched in 2010, was widely regarded as a step too far for the revived marque, it quickly accounted for more than a third of Mini sales.

Mini boss Peter Schwarzenbauer has already said he wants Mini to have five 'superhero' models.

However, BMW has yet to fully reveal the final Mini family line-up as the company's small-car plans remain in flux.

Schwarzenbauer recently revealed an example of how BMW's plans for its front-drive vehicles are still changing. He said the next-generation 1 Series might not be built on the UKL architecture and could remain rear-wheel drive after all. A decision will be made towards the end of this year.

As for the Mini brand, four of the superhero models will be on sale by late next year. The hatchback twins are one family, followed by the Clubman, Cabriolet and Countryman as stand-alone models. While it now looks like a production version of the Superleggera concept will be a spin-off from the Cabriolet, that leaves one more model line to be announced.

Two different models are rumoured. Firstly, it's thought Toyota and BMW engineers have been working on a joint city car platform that would potentially allow the tiny Mini Rocketman concept to be brought to life.

Secondly, it's thought a Mini Traveller MPV (essentially a sister car to the BMW 2 Series) has also been developed as a possible new model line.

On the downside, the Rocketman could be difficult to justify if Mini wants to head upmarket, selling larger and more expensive models.

However the plans for the fifth model line pan out, there will be a number of highly appealing Mini variants over the next 24 to 36 months.

It's thought Mini has drawn up plans for a coupé-like SUV based on the new Countryman. It would still have five doors and

be, in effect, a sister car to the planned BMW X2.

Meanwhile, a plug-in hybrid Clubman is in the works, using the same transmission as the 2 Series Active Tourer eDrive (see p26). A small electric motor is mounted on the rear axle, which is used to provide acceleration assistance and occasional pure electric drive.

Also expected is a high-performance Clubman aimed at the Volkswagen Golf R estate. This is rumoured to have a highly tuned turbocharged four-cylinder engine with as much as 300bhp and four-wheel drive. The same powertrain is expected to be used for a high-performance version of the new BMW X1.

A version of the new Countryman with genuine off-road ability is thought to be in development, too.

HILTON HOLLOWAY

New Countryman will be bigger than the current model

HILTON HOLLOWAY

Why Mini is pushing upmarket

THE CONSENSUS IS that the Mini brand, relaunched under BMW ownership in 2001, has been an object lesson in product development, branding, marketing and creating a demand for customisation.

However, Mini has not been a runaway success as a business, with profits likely to have been as small as the original Issigonis model was. Indeed, it is possible that over 14 years and two generations, Mini hasn't made any money at all, when the research and development spending is taken into account.

No one can be definitive about Mini's financial situation because BMW doesn't give details for the British brand. But there's little doubt BMW's decision to build front-drive

BMW-branded cars was given a huge push by problems caused by Mini's lack of scale.

Mini sold 305,000 cars in 2013 and 302,000 in 2014. That's not to be sniffed at, but it's a relatively small number for a global brand with a stand-alone platform.

It is almost impossible for a car maker to turn a profit on a car engineered, built and sold in Europe for a price of much less than £18,000. And although Mini has sold some highly optioned models, my suspicion is that the average Mini transaction price is not as high as BMW would like, or needs.

It's this essential calculation that has pushed the new Clubman into Audi A3 territory. Out goes the jokey, youthful

marketing image and in comes something more serious and worthy, with a price to suit.

Cars with high-level engineering content are ever more expensive to design, engineer and produce. Although this can be made to work for premium brands, it shows just how increasingly difficult it is for mainstream brands, or those charging mainstream prices. Which is why Mini is heading upmarket as fast as possible.

Mini's five 'superheroes'

MINI HATCH

The Mini hatchback is now available with either three or five doors. The five-door version may grow in the future but the three-door is unlikely to differ much from today's car.

MINI CLUBMAN

The new Clubman is drastically different from the previous one and is the largest Mini you can buy. It is now pitched as an alternative to hatches like the VW Golf and Ford Focus.

MINI COUNTRYMAN

The next Countryman looks likely to grow again, taking it back to being the biggest Mini available. A more rugged, off-road version is also likely, as is an SUV coupé.

MINI CABRIOLET

The all-new Cabriolet will not be notably different from the old version, retain the four-seat layout and a fabric roof. The two-seat Superleggera could be spun off this platform.

TO BE DECIDED

Mystery surrounds the identity of the fifth pillar in the future Mini family. Two possibilities are a production version of the small Mini Rocketman concept from 2011 and a possible Traveller-badged MPV.

Hyundai guns for Golf R

New Hyundai N performance division is readying an all-new i30 hot hatch for possible launch in 2017

The first Hyundai N division high-performance road car will be based on an all-new i30, according to the firm's World Rally Championship boss, Michel Nandan. The hot i30 is expected to go head to head with the likes of the Volkswagen Golf R when it is launched in about two years' time.

Nandan did not elaborate on the expected performance of the car, beyond saying that N-brand cars will have a "high-performance engine" as well as "more sporty suspension". The engine specification is still under discussion, according to Nandan, who confirmed only that it would be turbocharged using WRC-derived technology.

However, it is understood that the next-generation i30 is being developed on an all-new platform specifically engineered with the high-performance version in mind and that Hyundai wants to use the N brand to fight for sales

at the extreme end of the hot hatch market. That would mean competing directly with the 296bhp Golf R and 345bhp Ford Focus RS.

It is expected that a hardcore version of the i20 will then follow, as Hyundai seeks to capitalise on the N brand as a means of adding desirability to its wider road car range.

Although he wouldn't be drawn on any specifics about N, Hyundai's new European boss, Thomas A Schmid, said the firm knew it had to be able to compete with the very best hot hatches before launching the N brand.

"Whatever we do has to be credible in the marketplace straight away, because the brand needs to build credibility," Schmid said.

Hyundai's current WRC car is an N-badged derivative of the i20 hatchback, but that will switch to an i20 coupé from next season.

Nandan said the motorsport branch of Hyundai has worked with the road-focused N brand to develop the new cars.

"We are quite well connected because we exchange information and data," he said. "From our [WRC] side, we get help with calculations, and engineers from R&D look at what we are doing and which way we do it. It's more technical co-operation."

"It's not that you can transfer things from a rally car to a road car. It's impossible. They're completely different and it's not the same purpose. But in terms of technology, yes. For some materials and technologies, this can be done."

Hyundai hired Albert Biermann, former chief engineer of BMW's M division, at the end of last year, with the specific brief of developing cars for the N brand.

DOUG REVOLTA

Q&A THOMAS A SCHMID, COO HYUNDAI EUROPE

Why the WRC and not F1 or Le Mans?

"We talk about creating emotion all the time. At a racetrack, the paddock is the most organised place in the world. Sure, it is easy for guests, but the environment is quite sterile. On a rally, you stand by the track, see the cars come by a few metres away, maybe get splattered by stones and taste the dust. That is an emotional experience that is incomparable."

How long will it take for your brand image to match the quality of your cars?

"It takes time to build history and heritage. In the UK, probably everyone has a relative or friend who owned a Jaguar or Vauxhall when they were a child. They will have memories of Ford winning Le Mans and so on. That's why we're in the WRC, and why we sponsor events like the football World Cup."

Why did you bring the Genesis to Europe?

"To show the capability of Hyundai. We are producing a product which can compete in the premium set, and does so in Korea."

SUBARU LEVORG SET FOR UK

Subaru has confirmed that its new all-wheel-drive sports tourer will go on sale in September. The Levorg GT was revealed at the Geneva show in March and will come with a 1.6-litre boxer petrol engine. Pricing has yet to be announced.

BIG DEMAND FOR CIVIC TYPE R

The Honda Civic Type R is already sold out until February 2016. The first examples of the 306bhp, £29,995 hatch only arrived in the UK this month. Honda UK boss Philip Crossman said: "The car has already exceeded all our expectations."

AUTOCAR
IMAGE

TVR poised to open order book for new sports car

A REVITALISED TVR will start taking deposits for its first new sports car later this month.

The company says its decision to take deposits so far in advance of the car's 2017 launch is down to the "huge, positive public reaction" to its proposed new range of at least four new models, as reported

by Autocar last month.

Interested owners can place a £5000 deposit for the new sports car. It has been designed by Gordon Murray and will be powered by a Cosworth V8 engine.

Although the car's final price is still unknown, the previous cost of TVRs suggests

a likely starting price of £60,000, rising to £80,000 when fitted with performance-enhancing options.

TVR operations director John Chasey said: "We've been totally blown away by the reaction to the new car. Our phone lines and online enquiry system went into

meltdown when the news was announced and we decided that we must begin to bring a structure to the enquiries and build a delivery pipeline well in advance of production.

"Volumes in year one will be limited as we ramp up production, so this allows us to reward those

individuals prepared to make a financial commitment at this early stage."

From those small initial volumes, TVR will look to scale up production. Because the company plans to be guided by TVR's production outputs in its heyday, a total of up to 1500 units per year is likely.

Extrovert Seats on the way

SEAT BOSS JURGEN Stackmann believes the firm is on the cusp of being in a position to employ more extrovert designs on its vehicles – but he has warned his designers that they must never stray into creating 'fashion' vehicles.

Seat will launch a Nissan Qashqai-sized SUV next year, followed by a Nissan Juke-sized SUV the year after and a seven-seat SUV by 2019. Stackmann

believes that the small SUV in particular will give the firm licence to offer stronger style.

"Our first job has been to establish the core factors of the brand: reliability, safety, good value. Without these things, a design-led approach would be just fluff," he said. "But we are almost there, and the success of Leon shows buyers understand that."

"With that quality established, the time is

almost there to push design. Our design should be more overt than Volkswagen's. Our designers have done a fantastic job to date – so much so that they now do work across the VW Group – and there's scope to do more.

"My only caution is that we must never stray into fashion, where design compromises functionality or creates a look that is only desirable for a short period of time."

BLOODHOUND RECORD DELAY

The Bloodhound team's attempt to take the land speed record to 1000mph has been delayed until 2017. The car will aim to hit 200mph this year and then attempt to break the current 763mph record by passing 800mph next year.

OMENS GOOD FOR 308 R HYBRID

The Peugeot 308 R Hybrid looks set to make production. Peugeot boss Maxime Picat has published images of the 493bhp car being driven by PSA Peugeot Citroën chief Carlos Tavares, saying it looks like the car "is ready to move".

Lambo Urus SV possible

A hardcore Superveloce version of the SUV is being considered by Lamborghini

Several special-edition versions of the Lamborghini Urus SUV are under consideration, including a hardcore Superveloce model and a more focused luxury model, according to CEO Stephan Winkelmann.

"We have more than enough ideas, but it is too early to confirm anything," said Winkelmann. "All options are possible and we will work on evaluating them in the run-up to launch. If our customers want to see something, we'll do our best to meet their needs."

Earlier this year it was confirmed that the Urus will go into production in 2018. It will be based on Audi Q7/Bentley Bentayga underpinnings and finished at Lamborghini's headquarters in Sant'Agata Bolognese. It will be priced from around £150,000.

Winkelmann confirmed that the production version of the Urus is likely to keep the concept's rakish exterior but will have a significantly more comfort-orientated and conventional interior.

"The look will evolve from the concept, but you will

recognise it both as a pure Lamborghini and from the concept," he said. "Inside, it will have a look and feel that is a bit different from where we have been before. The surfaces are larger and the needs of occupants more around usability. The Urus must be capable of being a family's first car all year round. It must have driveability, comfort, roominess and more."

"Top speed and performance may be important, but the Urus is more about having a car that delivers Lamborghini levels of emotion while being capable

of being handled every day, on open and congested roads."

Winkelmann refused to reveal engine details of the Urus, beyond saying it would develop "around 600bhp". However, Autocar understands that the production version of the Urus will be offered with a plug-in hybrid powertrain and that a high-performance diesel engine is also under consideration.

"Nothing is set, but we have to consider what our customers want," said Winkelmann. "For now, we rule nothing out."

JIM HOLDER

Confidential

THE NORDSCHLEIFE circuit at the Nürburgring may be reprofiled so that speed restrictions, in place following an accident where a spectator was killed earlier this year, can be lifted. This would entail the introduction of a chicane and the flattening of two crests.

THE ROAD VERSION of the Glickenhaus SCG003 supercar will be unveiled at the Geneva motor show next year, and it will definitely have a twin-turbo V12 engine. The racing version was shown at this year's Geneva show.

GOVERNMENT CASH incentives will continue to play an important role in driving sales of electric vehicles, according to Renault-Nissan Alliance boss Carlos Ghosn. "EVs need to be made economically rational for consumers," he said. He added that tighter emissions rules could also encourage motorists towards EVs.

THE FIRST THREE months' worth of production of the Lotus 3-Eleven sold out on the first morning of its debut at the Goodwood Festival of Speed. Its £82,000 price is uncharted territory for a road-going Lotus, but boss Jean-Marc Gales pointed to those early sales and the fact that most people have gone for the £115,200 race version as evidence that the price is fair.

NISSAN WILL LIMIT its performance-tuned Nismo range to the Juke, 370Z and GT-R – and hold off from tweaking the Qashqai and X-Trail. "X-Trail and Qashqai are phenomenally successful and they don't necessarily need Nismo to give them that additional boost," said marketing communications boss Gareth Dunsmore.

Asterion 'unlikely', says Lambo boss

PLANS TO DEVELOP the Lamborghini Asterion 2+2 are on hold, as the firm concentrates on the launch of the Urus SUV and evaluates future model plans.

Described at the Paris motor show last year by Lamborghini as a "technology demonstrator", the Asterion was notable for combining its 5.2-litre V10 with a new seven-speed dual-clutch gearbox, a lithium ion battery pack and two electric motors on the front axle.

Despite reports that

the Asterion could make production, company CEO Stephan Winkelmann said that is now unlikely.

"It was built to show what we would do if the regulations forced us to have 30 miles of electric range as well as high-speed performance," he said. "Because of the weight of the batteries, we also took the opportunity to make the car bigger and roomier. We wanted to see customer reactions."

"They told us that they were open to innovation,

including hybrid technology, but only if it came with the benefit of added performance. A Lamborghini super-sports car is driven

maybe 3000 miles a year, not every day, so the electrification has to offer an added intensity to justify its inclusion."

NEW LAGUNA CALLED TALISMAN

Renault's replacement for the Laguna will be called the Talisman. The new model won't go on sale in the UK because of low demand for such saloons, but Renault says the car will deliver "intense driving enjoyment" in mainland Europe.

BENTLEY SPECIAL SELLS OUT

Bentley has launched a limited edition of the Continental GT Speed, celebrating the seven planes of the Breitling Jets display team. The seven examples feature new paintwork and interior detailing. All have already been sold.

BMW reveals advanced

Hydrogen fuel cell technology tested in i8-based prototype; new plug-in hybrid capable of 706mpg

BMW has lifted the veil of secrecy on some of its most advanced research vehicles to date.

The firm has been testing hydrogen fuel cell technology using a futuristic-looking prototype based on the i8, pictured here in official photographs. It has also created a super-slippery new plug-in hybrid research car that is claimed to return remarkable fuel economy of 706mpg.

The fuel cell prototype is a sleek two-door coupé that relies on carbonfibre to keep its weight down and features an aero package honed at BMW's wind tunnel in Munich. It hints at the look of future BMW i cars.

BMW is holding back on technical details. However, Autocar can confirm that the car, constructed in 2012, sites its fuel stack at the rear in the

position usually taken by the i8's petrol engine.

Power is 242bhp – 115bhp less than the production i8. BMW also quotes a 0-62mph time of less than 6.0sec and a top speed of around 124mph.

BMW says this prototype has recently been taken out of service. Having formed a joint venture with Toyota in 2013 and accelerated plans to make a production hydrogen fuel cell model by the end of this decade, BMW has now advanced its research activities to include a number of road-going prototypes.

Meanwhile, the wind-cheating petrol-electric plug-in hybrid prototype, which hasn't yet been photographed, is said to hold clues to technology that's destined for the next generation of BMW's i models and draws heavily on the firm's

experience with carbonfibre-reinforced plastic.

Sources suggest the new car weighs less than 1150kg. It is understood to have a drag coefficient of just 0.18.

To help it achieve this low Cd figure, it ditches traditional door mirrors in favour of video cameras that project images onto a monitor in the cabin.

The plug-in hybrid prototype is said to offer seating for up to four, along with "a useful boot, whose capacity is between 350 and 360 litres", according to our sources.

It is powered by a front-mounted turbocharged 1.0-litre twin-cylinder engine and an electric motor sited at the rear. As well as returning 706mpg, it is claimed to be capable of 0-62mph in less than 7.0sec, with a top speed of 112mph.

GREG KABLE

Water injection for turbo petrol BMWs

BMW HAS REVEALED a new water injection process that it plans to include on all of its future turbocharged petrol engines to reduce knock and increase overall efficiency, especially at high revs.

Already showcased on the M4-based MotoGP safety car (above), the new process injects a fine spray of water directly into the intake manifold, where it evaporates, reducing the combustion temperature in the engine by a claimed 25deg C.

By lowering the operating temperature of the engine, BMW claims to have achieved a 5-10% increase in overall power, along with a 3-8% reduction in fuel consumption, depending on the engine.

The water injection system is expected to enter production on facelifted versions of the M3 and M4, due next year, but it is being readied for all

of BMW's turbocharged petrol engines, from the 1.5-litre three-cylinder unit used in the 218i to the twin-turbo 4.4-litre V8 in the M5.

Water used in the injection process can either be stored on board in a tank or delivered via the air conditioning unit as waste condensation. To ensure it doesn't freeze during winter, the system is drained every time the engine is switched off.

BMW is also working on a more advanced process in which water is injected directly into the combustion chambers to allow a lower compression ratio.

Just how much added power the new manifold water injection process will bring to the facelifted M3 and M4 remains to be seen, although these models are expected to deliver between 446bhp and 467bhp in their facelifted guise next year.

GREG KABLE

What is it like to drive?

WE TRIED A 1 Series prototype fitted with the new water injection system recently at BMW's test track in Miramas, France. In this spec, BMW's turbocharged 1.5-litre three-cylinder petrol engine is claimed to produce 215bhp and 236lb ft of torque.

At low engine speeds, the effect of the water injection process was barely perceptible. However, at an increased pace around

the test track's high-speed loop, there was greater smoothness and refinement to the engine at higher revs. This was in part because of the lower compression ratio, which in turn lessened the knocking effect.

tech

Hybrids under consideration at Alpina

ALPINA COULD LAUNCH a hybrid model, according to the firm's CEO – but only when BMW makes a suitable car on which to base it.

The small Bavarian manufacturer, whose cars are built on the main BMW production line, has enjoyed sales success with diesel

models recently. However, the increasing success of hybrids and pure electric vehicles such as the Tesla Model S has forced Alpina to consider introducing a hybrid model.

Speaking at the firm's recent 50th birthday celebrations, CEO Andy

Bovensiepen said: "Hybrid technology is advancing quickly. We're now seeing what I'd call 'second-generation' hybrids and EVs, like the BMW i8, and it's becoming more interesting.

"The thing we have to remember is that our customers like to drive quickly and they also buy our cars to be used daily. And hybrid technology hasn't been good enough for that up to now. The danger is that the car is terrific for 200 miles, but then the small battery runs out and for the rest of the journey you have a disappointing drive.

"If we have a good technical base of a car from BMW and we also see the sales figures taking off, then we could have a car ready within two years."

Bovensiepen also said Alpina would continue to look at alternative fossil fuels, including LPG, as well as hybrid applications.

"We can't forget our six-cylinder petrol engine," he said. "Sure, we have strong demand for diesel, but the gains in petrol engines have been very strong as well."

Fuel cell prototype hints at the styling of future BMW i cars

Open-top Evora 400 will have the same spec as the coupé

**AUTOCAR
IMAGE**

Lotus plots open-top Evora 400

Roadster version of the hottest Evora in the works, with 400bhp and a chassis as stiff as the coupé's

Lotus will launch a roadster version of the Evora 400, boss Jean-Marc Gales has revealed to Autocar.

The new model will follow the introduction of the 400bhp V6-powered Evora 400 coupé, which is set to go into production next month.

"We are working on it now," said Gales at the recent Goodwood Festival of Speed.

Gales said the Evora 400

would lose no structural rigidity when converted from a coupé to a convertible due to the design of its extruded and bonded aluminium tub chassis.

"It's a quicker build," the Lotus boss said, "as the chassis is a tub, so there's no impact with the roof off."

The roof of the Evora roadster will be made up of two removable panels weighing 3kg each. The panels can be

stored on board behind the front wheels.

Gales, who has driven the model in its development, said the Evora roadster is crucial for the firm in North America in particular, where half of all sports cars in the Evora segment are open-top.

The Evora roadster is otherwise expected to match the spec of the Evora 400 coupé, including its

supercharged 3.5-litre V6.

New versions of the Elise and Exige are also in the works, said Gales. "The next Exige and Elise will be faster and lighter," he said, a formula that will be true of all future Lotuses under Gales's reign. Cars will also be more practical for everyday use.

Gales said the firm is on track to sell 3000 cars this year, up from just over 2000

last year and around 1200 in 2013. That's in part down to an expanded dealer network. Lotus has 50 more dealers than this time last year, with another 20 planned this year.

On Lotus's finances, Gales said: "We will be cashflow-profitable in this financial year and profitable in the financial year beginning 1 April 2016 for the first time in 60 years."

MARK TISSHAW

Revised Fiat 500 set for UK launch in September

OFFICIAL PICTURE

THE FIAT 500 has been given a revamp, with lightly refreshed styling, tweaks to the engines and suspension and equipment upgrades inside.

Fiat refers to the latest version as a new car, with as many as 1800 changes. However, it features only minor styling revisions and retains the same small dimensions as the outgoing version in both hatch and convertible forms.

The front end now has LED daytime running lights and a restyled trapezoidal grille, with chrome strips on either side.

The rear light clusters have also been restyled. The rear foglights and the reversing lights have been relocated to the edge of the car, too. The large chrome boot grab handle has been retained.

Inside, there is a new

Uconnect multimedia screen, which is standard on all models and has touchscreen capability on Lounge trim.

Lounge also comes with Uconnect Live, which hooks up with Android and Apple smartphones and displays apps from the phone on the screen.

The high-trim models have a 7.0in instrument cluster to display driving data.

The cabin also gains more soundproofing throughout in a bid to improve refinement.

There will be three trim levels from launch: Pop, Pop Star and Lounge. Pop comes with a steering wheel that has buttons with chrome-plated edging. Pop Star adds air conditioning, chrome-plated door mirrors and alloy wheels. Lounge adds parking sensors, a panoramic glass sunroof, a

leather steering wheel and a chrome-plated front grille.

The 500's engines have been tweaked to improve emissions and fuel economy. A 0.9-litre petrol Twinair is available with 84bhp and 104bhp. The 84bhp version now emits 90g/km and is capable of 74.3mpg.

The most efficient unit is the 94bhp 1.3-litre Multijet diesel, which now emits 89g/km.

The final engine is a 68bhp naturally aspirated 1.2-litre petrol unit rated at 99g/km. The 1.2-litre petrol and diesel are not confirmed for the UK.

Fiat also says the suspension has been revised to improve comfort and handling.

Pricing starts at £10,890 – £200 more than the outgoing version. The full range of prices will be revealed closer to the car's arrival in September.

Jag F-Pace: used as support for Team Sky on first stage only

Prototype F-Pace in Tour de France bow

A PROTOTYPE VERSION of the 2016 Jaguar F-Pace has appeared as an official support vehicle for Team Sky in the Tour de France cycle race.

The car was still camouflaged, but it has given the clearest indication yet of the look of the upcoming SUV.

The prototype was designated as a support vehicle for only the first stage of the

Tour, the so-called Grand Depart. This stage was short by the Tour's standards, being a 13.7km time trial. It took place in Utrecht in the Netherlands on 4 July.

The F-Pace carried four team members and equipment to support the likes of British rider Chris Froome of Team Sky on the opening day of the event. The F-Pace will not be following the team through the rest of the race around France.

The finished production version is due to go on sale early next year, following its debut at the Frankfurt motor show in September.

The launch of the F-Pace marks the first time that the 80-year-old manufacturer has entered the SUV market.

SPY SHOT
FIAT AEGEA HATCH

Fiat hatch spied

THE FIRST PROTOTYPES of the new Fiat Aegea hatchback have been spotted testing. The car is due to go on sale next year.

The Aegea hatchback is based on the same platform as the saloon variant, which was unveiled at the Istanbul motor show in May and will

go on sale in 40 countries from November. Fiat is still assessing whether to bring any of the Aegea line-up to the UK, but the hatchback stands a far greater chance than the saloon.

As well as the hatchback and saloon, an estate version is also planned.

Tester's Notes

Matt Prior

McLaren claimed a sub-seven-minute 'Ring lap time for P1

A reader writes: "Would it matter if car makers no longer set lap times on the Nürburgring?"

To recap: at the moment, there are speed limits on certain sections of the German race track following a fatal racing accident this year. So car makers can't now set lap times for road cars, and there's some uncertainty about whether it'll stay that way.

Reader, though, might have a point. His thinking is that, if you ditch the lap time flag waving, you ditch cars being timed on a racetrack, which is good because even though the Nordschleife is twisty and bumpy, unless your name's Sabine or Walter, it's not representative of the places you drive very often.

I agree, but I'd still worry. Car makers like an opportunity to tell you how fast their car is, relevant or not. Hence 0-60mph times – less relevant than they once were, but still some kind

I think Lord March would quite fancy a new benchmark being up the hill at his gaff

of benchmark we understand.

Even if manufacturers don't like being overtly transparent against other machines, they'll tell you how fast cars are on their own test circuits.

So 'Ring or not, we'll end up being quoted relative lap times anyway. And when it comes to performance cars, I'd buy the argument that there is relevance to it. I think there's merit in knowing that the latest hypercar trio – the McLaren P1, Porsche 918 Spyder and LaFerrari – are probably, there

or thereabouts, as quick around a circuit as a late 1970s/early 1980s Formula 1 car.

The three of them were together at the Goodwood Festival of Speed the other week in the Supercar Runs, on which I commentate. And I think Lord March, boss of Goodwood, would quite fancy a new performance benchmark being up the hill at his gaff, hence a timed Supercar Shootout on Saturday afternoon. A Noble M600 won it from the Lexus LFA and Aston Martin Vantage GT12. Annoyingly, the hypercars declined to be timed.

Perhaps that's because a 50sec run where there's little more than a quarter turn of the wheel in either direction isn't that enlightening, and because driver error is amplified tenfold because the distance is so short.

The same could be true of the handling circuit we use at MIRA proving ground, hence we average several laps. And that remains, Nürburgring aside, the best and most diverse handling circuit I've driven.

Still, I suspect car makers won't be able to stop themselves finding a track, in which case they might as well use the most challenging. We might be careful what we wish for if we hope the Nordschleife remains out of action. Better cars are benchmarked there than somewhere even less representative.

Anthony Reid's M600 was quickest in Goodwood's timed shootout

A NEW BEGINNING

INTRODUCING
THE ALL-NEW **VOLVO XC90**
MADE BY SWEDEN

BOOK YOUR TEST DRIVE
AT **VOLVOCARS.CO.UK**

Official fuel consumption for the all-new Volvo XC90 in MPG (l/100km) ranges from: Urban 28.8 (9.8) – 45.6 (6.2), Extra Urban 40.4 (7.9) – 52.3 (5.4), Combined 35.3 (8.0) – 134.5 (2.1). CO₂ Emissions range from 186 – 49g/km. MPG figures are obtained from laboratory testing intended for comparisons between vehicles and may not reflect real driving results.

A Week In Cars

Steve Cropley

Prospect of new TVR sports cars has met with an enthusiastic response

MONDAY

Back to work after a 350-mile weekend in our Porsche Panamera plug-in hybrid, a fascinating experience because although one associates Porsches with efficiency, decent fuel economy is at best a by-product of what they offer.

Just as well, it turns out: my gently driven 35mpg wasn't so different from what I get from our V6 diesel Range Rover Sport, a heavier car with a bigger frontal area. Still, in nearly every dynamic way the Panamera is a fine car. I loved the consistent feeling of deliberateness and precision about every pedal, lever and switch, faithfully imported from the sports cars, and the long wheelbase and low seating made it high-miles comfortable despite suspension rates that also made it steer and handle.

The plug-in Panamera's conclusive advantage is that, if bought by a business, it qualifies for a 100% first-year write-down because its 15 to 17-mile electric range drops its CO₂ below the critical 75g/km threshold. Good wheeze if this applies to you, although I'm not sure our government should be buying Porsches for the business community.

Even with our knowledge, we're still having the petrol versus diesel debate at home

TUESDAY

There's rising concern about the suitability of diesel cars for our future motoring needs. As you'll be aware, a recent campaign by various academics and a Sunday newspaper has made an impressive case for believing that legislators erred in the past by emphasising reduced

CO₂ levels instead of better air quality (lower NO_x and particulates), a strategy that encouraged more diesel sales.

How does this affect me? We continue to prevaricate at home over replacing the Steering Committee's 58-plate Fiat 500 diesel, a car that complies with the outgoing Euro 5 emissions regulations, not the much tougher Euro 6 standards that are due to be introduced this September.

After September, particulates limits will drop to a tenth of what they were in 2000, while NO_x will have fallen 84% in the same period. Truth is that Euro 6 diesels are very clean, yet with our comparatively high degree of knowledge on the subject, we're still having the petrol versus diesel debate at home.

Plug-in Panamera comes with tax breaks that will be a boon to some

I'm pretty sure we'll finish up with diesel again (missus enjoys the low-end torque), but I'm also pretty sure new oil-burners are going to get harder to sell in future. And what of all the old-tech but perfectly healthy diesel cars? Reckon they could become a real problem.

WEDNESDAY

With Le Mans, Goodwood and the British GP out of the way, I always feel a degree of concern, because the season is more than half over and my head is still in April. Once again I've already missed some favourite events – Cholmondeley, the Brooklands Double Twelve – and I'm going to miss the Silverstone Classic and umpteen fixtures at Prescott and Shelsley Walsh. It's only July and I'm writing 2016's first resolution, which is the same every year: organise your weekends better...

THURSDAY

Rang TVR boss Les Edgar following news that he and his partners are to take deposits on new cars (due in 2017) from prospective owners seeking early delivery. He has been delighted with the response, revealing that thousands had already signified their interest online and "several hundred" were offering money to join a waiting list even before such a thing existed (see p15).

This exciting response is much more than an enticing commercial opportunity. It is a heartening affirmation, by Britain's battalions of sports car enthusiasts, that the new TVR's principals have chosen the right partners – Gordon Murray for the chassis and styling, Cosworth for the powertrain – and are right on track. How many years has it been since we've been able to say that?

And another thing...

The last thing we expected to see at work this week was the 2015 Le Mans winner's trophy, perched beside a bunch of filing cabinets. But winner Nick Tandy has friends at Motorsport News, our sister organ, and he dropped in to show it off. Top bloke.

ON SALE NOW

Porsche Boxster Spyder

2.7.15, Tuscany More power and less weight for purist's version of Porsche's mid-engined roadster

You'll probably remember the previous Boxster Spyder. It was the particularly pretty one with an ugly, fiddly roof that had to be raised and lowered by hand, the removal of the operating mechanism being part of a comprehensive weight loss programme that shaved around 80kg from the cooking model.

It received a new engine, too – the 3.4-litre flat six from the Cayman S – which revved more enthusiastically than the standard unit. Problem was, it was only slightly more powerful than the cheaper Boxster S, and as Porsche had gone to the trouble of stiffening the chassis, the car felt like it might make use of yet more power.

Five years later and Porsche has endeavoured not to repeat those mistakes with the new version. While there's still a manual fabric roof to open and close, the hood is much simpler and seals shut at the push of a button. More importantly, the latest engine transplant is an unequivocal upgrade, with the regular Boxster unit switched out for the 3.8-litre flat six normally found in the 911 –

a fitment already perfected in the Cayman GT4.

At 370bhp, the Spyder is 45bhp up on the 3.4-litre GTS and therefore the most powerful Boxster yet. Positioning means it's 10bhp shy of the GT4, although it shares its six-speed manual gearbox and, visually, gets the same front and rear ends.

What it doesn't have are all the trick underbody elements that made the GT4 a product of Porsche's GT motorsport division. Instead, much as before, the Spyder is lowered by 20mm on the same firmed-up passive sports suspension that's already available as an option on the GTS; only a tweaked rear anti-roll bar differentiates the two. Elsewhere, it gets bigger brakes and has a faster steering ratio to go with its marginally smaller steering wheel.

The inside is as spartan as the outside is fabulously pretty. At 1315kg, the Spyder is not only lighter than a GTS but also marginally skinnier than a GT4. Some of the weight loss is accounted for by the stripped-back roof and the

requirement for you to do the lifting, folding and lid-slammng yourself (a doddle, albeit a two-minute walk-around one). Some of it, though, is in the doctoring or deletion of kit, including the removal of the infotainment and air-con. Returning them is a no-cost option (mercifully), but it comes with the guilt-laden acceptance of a 15kg weight penalty. Nevertheless, doing so is highly

Yes, 370bhp makes the Boxster Spyder fast. Fast in hugely loud, high-rev, moreish doses

The Spyder is undeniably pretty; bigger brakes help to rein in its flat six's 370bhp

Porsche's weight loss programme included the deletion of the air conditioning and multimedia, but they can be refitted as a no-cost option

The roof must be folded manually to enjoy the full wind-in-the-hair experience; the engine is peaky, so the Spyder needs room to stretch its legs

recommended, especially as, initially, the Spyder makes little discernible virtue of its abstinence. Lighter it may be, but as it requires more heft at the smaller wheel, a leg-press thrust to operate the clutch and dogged determination to engage a gear, it's clear that Porsche's idea of unfiltered driving pleasure doesn't necessarily translate into dainty ease of use.

Unexpectedly, this extends to the acceleration. The new motor is torquier – to the tune of 45lb ft over the GTS – but the nature of the flat six is unchanged, meaning you won't see the 310lb ft peak until nearly 5000rpm. In and around town, and even on tight Tuscan switchbacks, lack of space and the gearbox's longish ratios mean you'll be lucky to share a meaningful encounter with the engine's tastier sweet spot.

Consequently, just as the Spyder's salacious body wants for a backdrop of unbroken blue, so its underside hankers for the sweep and surge of properly wide open spaces. Starting on the autoroute, the 3.8 begins to roll out its charm. The standard

Boxster knee-jerk shift into fifth for outside lane overtaking is all but redundant, as sixth now produces a steady stream of energy on request.

It gets better. Pitched onto an Italian back road, the Spyder bites down like no Boxster before it. The steering reveals its additional meatiness to not be meatiness at all but rather a honed wonder rack that allows bends to be skewered with tiny, ego-flattering wrist movements. The ride – inevitably a little pinched around town – settles into a wonderfully controlled ebb and flow, seamlessly connected to the road yet resistant to anything that might unsettle its stellar body control.

Then there's the power. Yes, 370bhp makes the Spyder fast. Fast in that cheek-puffing way that no Boxster has previously managed, fast in hugely loud, high-rev, moreish doses. Fast enough, in fact, to make the paltry seven-second difference between the Spyder's Nürburgring lap time and the Cayman GT4's seem entirely reasonable.

But the real boon is the enriching

effect it has on the chassis. The Spyder's limits, previously a hidden pleasure only available to the unhinged on track, are now tantalisingly within reach. Its mid-engined character is unchanged; it has just been broadened to include a better awareness of the diff-equipped back-end, which, by wearing 265-section tyres in place of the GT4's 295s, becomes a far more interactive part of the cornering equation.

Whether that makes it the best Boxster is open to interpretation. The Spyder is harder to live with than the GTS, thirstier and, of course, more expensive. The GTS can be had with the adaptive dampers, is nearly as fast in everyday driving and doesn't require you to get out to put the roof back on. Much of the time you might find yourself happier in it. But when the occasion presents itself, the meaner, leaner, faster and much, much prettier Spyder is so worth the strife. A Cayman GT4 without a roof? Not quite. Although being as close as it gets is more than good enough.

ON SALE SPRING 2016 (EST)

BMW 2 Series Active Tourer eDrive

30.6.15, France Pre-production prototype previews a plug-in hybrid powertrain for BMW's MPV

BMW may have been reluctant to start building front-wheel-drive cars (rival Mercedes started back in 1998), but it is now rolling out new variants of its UKL platform with gusto. From next year, that will include this plug-in hybrid 2 Series Active Tourer eDrive.

Although our test car was a pre-production example, it is very close to showroom tune. BMW won't yet say precisely when the car will go on sale, but next spring is a good bet.

As you might expect from BMW, there's an impressive elegance and clarity of thought behind the conversion to a hybrid powertrain. At its core, the front-wheel-drive Active Tourer's layout is retained, with a 1.5-litre three-pot turbo petrol engine driving the front wheels via a six-speed automatic gearbox.

However, the transmission gets the addition of a starter/generator. This can be used as a charger to top up the battery pack, plus it makes for swift and smooth restarting when the engine has stopped. It can also be used to boost performance at the

front wheels, putting an extra 20bhp and 111lb ft into the system.

Charge from the generator is sent to a 7.7kWh lithium ion battery pack, which sits in the same underseat space as the fuel tank. As a result, the fuel tank has shrunk to 36 litres and the 50-litre storage space under the boot floor is lost. Additionally, the fuel tank is now made of steel and is pressurised to allow the petrol to be stored safely over longer periods if the car is run mostly on battery power. Aside from the charger flap in the front wing, however, this looks like any other Active Tourer.

The car's rear end is the familiar Z-axis, with more or less the same differential and driveshafts as the all-wheel-drive 2 Series Active Tourer. An electric motor is mounted aft of the rear axle, driving the rear wheels directly via the differential.

A couple of laps of BMW's test track couldn't tell us too much about the car in the real world, but it did give a decent taster. First, it's pretty fleet of foot and, thanks to all-wheel drive (combustion engine driving the front

wheels and the electric motor the rears), feels well planted with the two engines operating at full power.

Second, the all-wheel drive system is claimed to be especially quick-reacting and sensitive to road conditions. BMW demonstrated this by driving this pre-production model up a 50% incline with a loose surface. Even with three adults on board, the transmission was able to sit

It feels like a brisk normal car, and any assistance from the electric rear axle is extremely subtle

From the outside, the eDrive is barely distinguishable from any other Active Tourer

With both power sources working together and drive sent to all four wheels, the Active Tourer eDrive is swift and impressively stable in turns

Various drive modes blend petrol and electric power as you or the car sees fit; lithium ion battery pack's charging socket lives on the front wing

stationary on the slope and pull away without any hesitation or discernible activation of the traction control.

One of the best things about the eDrive is that it uses a conventional transmission rather than a CVT. This means it feels like a brisk normal car, and any assistance from the electrically driven rear axle is extremely subtle, although there's a distinctive whine in the cabin from

the electric motor, and you know you're in a hybrid when the car pulls away on battery power alone. BMW says the Active Tourer eDrive can get to 50mph on battery power alone before the petrol engine kicks in.

Punted around the track, the Active Tourer eDrive seems to have been polished nicely. It's well balanced in corners and stable at speed, and the steering is usefully

direct and positive in tight curves.

Max eDrive mode, which uses both power sources together, delivers both handy pace and a sense of tied-down stability that you wouldn't get with many of the latest part-time all-wheel drive systems. Although the seating position is slightly higher than that of a conventional hatchback, the Active Tourer doesn't have any sense of being on tip-toe through quick corners.

For the rest of the time, the car feels like a very good conventional front-driver. Auto eDrive mode, which has the car shuffling between petrol and battery power in the most efficient way it sees fit, is the car's default setting, and it works admirably.

The Active Tourer eDrive has an extraordinary range of abilities and doesn't feel anything less than conventional to drive, which makes it an intriguing proposition. BMW has managed to introduce hybrid power and exploit the benefits of electric traction for more than just economy. It's a clever and compelling car.

HILTON HOLLOWAY

BMW says the Active Tourer eDrive can travel at up to 50mph in pure electric mode

Skoda Superb 2.0 TDI 4x4 Estate

1.7.15, Munich Practicality is cranked up another notch, even by the Superb's high standards

Even Skoda's own executives, proud as they are of the previous Superb, admit that it was no beauty. So this new model seems to have solved the biggest problem already, delivering crisp, modern lines over pleasing proportions.

This estate version takes the Superb's ethos – big space and practicality for a reasonable cost – even more seriously than the hatch. A vast load bay offers a capacity of 660 litres with the rear seats up and is filled with useful touches, such as spring-loaded rear seatbacks that topple flat at the pull of a lever and a boot floor that can be raised or lowered one-handed. So far, so 'simply clever'.

There's a good range of familiar engines on offer. Here, we're testing the 2.0 TDI in 187bhp form. It's the only engine in the Superb that can be had with Haldex on-demand four-wheel drive and a DSG dual-clutch automatic gearbox.

The engine isn't the smoothest, though. It sounds a bit gritty in the cabin even when it's not under load,

although it's no louder than most rivals and delivers easy torque across most of the rev range.

The DSG 'box executes its shifts smoothly and at the right moment, making for properly laid-back progress, although it also throws in the occasional unnecessary downshift and can be slow to respond when a downchange is needed on a steep incline. It's more predictable in Sport mode, but the most satisfying way to thread the automatic Superb down a decent road is by using the paddles, even at the moderate pace that best suits the car.

The handling is as unflappable as you'd expect. The Volkswagen Group's MQB platform and various weight-saving measures keep the car from being quite as heavy as it looks, so you can swing the Superb vigorously into a corner and enjoy neutral, composed manners.

In the dry, the four-wheel drive system doesn't make much of a difference other than to stave off understeer more gamely, but this Haldex system is very effective in

other installations, suggesting that it'll be great for pressing on unfazed through a mucky British winter.

Our car came on adaptive dampers (optional on all but high-end Laurin & Klement trim), which allow fairly pronounced body roll even in Sport mode. But more disconcerting is the amount of body float you get on undulating roads in the softer settings. There's lots of loose vertical damping at the back in particular. Skoda is already planning to alter the settings in Comfort mode to keep it better tied down, and this change will be rolled out in cars built from later this summer. For all that, the ride in the default Normal mode is settled, apart from the occasional mid-corner thump and shimmy.

Inside, the big Skoda feels anything but budget, despite the value factor that remains its trump card. SE L trim – which gets an 8.0in touchscreen with sat-nav, powered tailgate, rear parking sensors, leather and electrically adjustable front seats – will feel classy enough without paying £3620 extra for Laurin &

Klement trim. Even the extremely tall will be able to get comfortable, and the rear pews offer limo-like space. Boot volume is impressive, too.

Given the space and kit on offer, the Superb Estate looks good value, albeit not so much in Laurin & Klement trim, which is hard to recommend at BMW 5 Series prices, despite its dramatically higher equipment level. Otherwise, the closest rival to this range-topping, all-weather Superb wagon is the Subaru Outback, which is similarly well equipped and cavernous, but also much slower and hampered by its CVT. A high-spec Ford Mondeo is a more convincing alternative for those who want an entertaining steer, but it's easy to see why you'd go for the Skoda's calm drive and roomier interior instead.

VICKY PARROTT

ON SALE SEPTEMBER

Volkswagen Touran 1.6 TDI

29.6.15, Amsterdam Third-generation mid-size MPV moves to VW's MQB architecture

The Volkswagen Touran has carved out a niche as the medium-size MPV for the sensible family man, and this new one develops that theme. So while it isn't quirky, funky or sporty, it is smart, solid and upmarket.

The headline changes to the car for this third-generation model can be summarised thus: it's slightly bigger, lighter and pricier. The adoption of the Volkswagen Group's MQB platform makes the first two possible, adding the flexibility to stretch the wheelbase and shorten the front overhang while still taking 62kg out of the kerb weight, despite adding 130mm to the overall length.

A subtle price repositioning is not unusual at the introduction of a new-generation car and justified by a more generous standard equipment level. Entry-level models get a crash mitigation system, touchscreen multimedia, DAB, Bluetooth media streaming, air-con, roof rails and seven seats all as standard.

The engine range for the UK will

consist of two turbocharged petrol units and three diesels. The petrols are VW's 1.2 and 1.4 TSI engines making 108 and 148bhp respectively, the 1.4 being available with a manual or a DSG dual-clutch automatic gearbox. The diesels are the familiar 1.6 and 2.0 TDIs, with outputs ranging from 108 to 187bhp. Both of the lesser-powered diesels are offered in manual or DSG forms, while the 187bhp 2.0 TDI is DSG-only.

The mid-spec 1.6 TDI SE, as tested here with the DSG 'box, should be the most popular model in the UK. It's a pragmatic, practical and classy car that's comfy, refined and easy to drive, if a bit bland for some tastes.

The interior is its strongest selling point. On perceived quality, it's a cut above that which you'll find in a Citroën Grand C4 Picasso or a Vauxhall Zafira Tourer and on a level with a BMW 2 Series Gran Tourer.

Soft-touch plastics cover the whole of the dashboard and the tops of the doors, while smooth leather facings cover the primary controls, and every

fitting is substantial and robust.

Occupant space is good by like-for-like standards. The Touran and its ilk are narrower and shorter than full-size MPVs such as the Seat Alhambra, so in the second row the Touran offers good leg and head room, but its seats are a touch small for grown adults. The third-row seats are usable and easier to access thanks to some bigger back door apertures, but you wouldn't call them adult-sized. But all five back seats have Isofix anchorages, and while the middle three slide and fold independently, the rearmost two collapse into the boot floor easily enough. Meanwhile, in five-seat mode, the Touran's boot has a class-leading capacity of 743 litres up to the window line.

To drive, the Touran is comfy, slick and consistent. It's also a bit middle-of-the-road and forgettable, but that's the price of its easy-to-use nature. The car rides with supple calm and steers with a directness and weight perfectly matched to its moderate grip and body control. Wind and

road noise are well isolated, too.

VW's 1.6 TDI continues to feel undernourished and it falls short of the standards of the best low-emissions diesels on responsiveness and flexibility. But its outright performance is acceptable and the real-world economy easily surpassed 50mpg on our test route.

The Touran is relaxing, smart, robust and full of practical features and has been turned with the kind of attention to detail you expect of a VW. It's lighter, more efficient and more economical than many rivals, too.

The only question is whether you're comfortable enough about your own need for an MPV to actually become a Touran owner, because Volkswagen evidently doesn't see the need to add much in the way of spice to an otherwise very complete recipe.

MATT SAUNDERS

Cabin is well equipped and perceived quality is high; Touran rides well and steers nicely, but it's a forgettable driving experience

THE** **HEAT** **IS ON

McLaren puts its cars through arduous testing in extreme conditions, and the new 570S is no exception. **Matt Burt** joins the test team in the Arizona desert

Brutal. That's the only word to describe it. Development engineers from McLaren have just lapped a proving ground test oval at 150mph in a priceless prototype version of the firm's new 570S Coupé. Now they've abandoned the car – doors closed, windows up, still idling – in the searing heat of the Arizona desert and retired to the shade of an awning, which offers some respite from the 40deg C heat. The car may not be moving, but it is still subject to huge amounts of energy.

The asphalt is another 20deg above the ambient temperature, so the 570S – finished in sun-loving Stealth Bomber black – is being smothered with not only solar rays but also radiated heat from the ground. With the twin-turbocharged 3.8-litre V8 burbling away, it is generating its own warmth, too.

There is a point to letting it stew in its own juices. This heat soak test, monitored by hundreds of thermal sensors all over the car, enables McLaren's hot-weather test team to assess the car's capabilities in the most hellish conditions.

"An idle soak condition is where you might see peak temperatures in the engine bay," says Geoff Grose, McLaren's head of vehicle development. "We have to look for things such as material stability, which means checking for discoloration or deformation of parts. We're also concerned about items such as the alternator, air-con compressors, oil temperatures for engine, transmission and clutch and the water cooling systems. They've all got their limits."

The heat soak test is just one of the gruelling challenges that the 570S prototype must undergo to ensure that it can cope with anything an enthusiastic owner might throw at it.

Grose recalls a competitor's car that McLaren acquired for benchmarking when the company

Yucca proving ground's tight, twisty handling circuit produces valuable data for the test team to number crunch

was developing the 12C. "Our guys did a couple of launch control starts and broke the clutch. The aim of our cars is that you can use the launch control all day."

Another punishing test involves hooking up the prototype to a heavy trailer (don't go looking for the tow hook on the McLaren options list) and dragging it around at slow speeds. It's all designed to replicate the extremes of everyday driving.

"In the real world, there is an infinite spectrum of conditions in which the car can be," says Grose. "We want to reduce that to something that's repeatable through testing. The towing test is something we've done for a long time to get a consistent heat load into the car at a lower speed. You are artificially building up engine bay temperature because it is not getting that cooling outflow. Sometimes a city cycle with stop-go traffic can be quite arduous like that."

McLaren uses a secretive facility near Yucca, Arizona. All right, you can see it on Google Maps, so it isn't exactly Area 51, but security is tight and even if you manage to vault the facility's retaining

wall, the threat of rattlesnakes lurking in the scrub makes an effective deterrent.

Arizona is popular with test teams because of its consistent weather patterns, which can be accurately predicted weeks ahead. During our visit, a heavy storm rolled in, prompting the local authorities to send out flood warnings. McLaren being McLaren, it doesn't leave that kind of planning to chance.

"We've got about 10 years of historic weather forecasting for this area and it's very accurate, so one month before we came here, we saw that storm coming and planned around it," says vehicle development engineer Andy Beale. "We're trying to hit the peaks in the weather window. Earlier in this test, we were rushing to get out for some testing we needed to do at 35deg C and we kept being very pressed with that because the temperature was ramping up so quickly. When we need 40-45deg C ambient temperatures, we change our test plan accordingly."

Heat soak tests make the car so hot that the technicians have to give it time to cool down →

Testing in this challenging environment helps to ensure that the finished 570S will be able to deploy its twin-turbo V8's 562bhp to its full capability in all temperatures

THE 570S HAS BEEN CHILLED TO -20DEG C OVERNIGHT

Meanwhile, at the other extreme...

FOUR MONTHS LATER, the 570S sits idling again, only this time excess heat wouldn't be unwelcome to those of us standing around it. The location is similarly secret and the fences similarly high, but the Sports Series McLaren is now inside one of the northernmost test facilities in Europe, in mid-winter, and has been chilled to -20deg C overnight.

Started from cold, it has to clear its windscreen of frost within a set timeframe to pass certain federal tests, but that's just one of the ordeals that Andy Beale and his team will put the 570S through in their Swedish encampment.

Trying to make the car fail is part of it, but extreme cold can be used to assess and tune other systems, too. Even though the hardware is mostly established, a plethora of adjustments is still to be made before the 570S is signed off.

At this stage, on automatic, the heating, ventilation and air-con system still allows the windows to steam up, so its software will be tweaked. Meanwhile, McLaren big cheeses are

due to arrive in a few days' time to try out the latest versions of the traction and stability control programs. Among it all, Beale's team also push the 570S as hard as they can, trying to invoke failures or discover problems. It'll be embarrassing if they do on the day the bosses turn up, but infinitely preferable to it happening to a customer.

MATT PRIOR

← again before they tinker with it. The advantage for Autocar is that we get plenty of time to have a careful look (but no touching).

This, the first car in the Sports Series strata of McLaren's growing range, is its most usable sports car, venturing into territory occupied by fast Porsche 911s and Audi R8s. It's a fresh challenge, but some familiar elements make the test team's job easier. For example, the engine is an evolution of the one already used in the 650S and P1, in this instance producing 562bhp and 443lb ft. Elsewhere, there are key changes. The 570S incorporates more aluminium into its bodywork in place of the more expensive carbonfibre used in other McLarens. The sophisticated interlinked suspension that is a feature of the 650S has been replaced on the 570S with a double-wishbone design paired with adaptive dampers and anti-roll bars. The car also has fixed aerodynamics as opposed to the active kit seen on Woking's other models.

The carbonfibre MonoCell chassis is tweaked from the version used in the 650S. In line with the new car's focus on usability, it has modified sills to make it easier to get in and out of the cabin.

The coupé is the first of two expected closed-roof bodystyles for the 570S. This one is dramatic enough, featuring rear bodywork that's shrink-wrapped over the engine bay, a flying buttress arrangement on the C-pillars and an upright, curved rear window that reminds me of the coolest 1960s Le Mans racing cars.

On this prototype, dubbed XP104, most of the major body sections are pretty much as they will appear in production, but some smaller elements, where the definitive shape might not have been signed off, have been made using rapid prototyping. The test team can live with that. It has to remain laser-focused on its objectives.

"You need to make sure the attributes that really matter for a particular test are up to date," says Beale. "So handling for these cars on this test is not a big deal. We can get the heat energy on track with an immature damper calibration setting, but we can't have an immature cooling package or performance software."

Unrepresentative handling or not, I'm not about to say no when Beale beckons me towards the passenger door of the prototype 570S for a ride around Yucca's short, tight, handling track.

"The ESP is still on. Where's the fun in that?" he asks rhetorically as we strap in. Disabling the ESP isn't easy, because the prototype is a jumble of wires and data-logging equipment, so the buttons and switches don't operate as they would on a properly furnished customer car.

Although the test mule's exterior shape is as representative as is practical at this stage of development, the interior is a mix of 650S fascia and some 570S components. "It's essentially just kit to allow the car to run," says Beale. Compared with the 650S, the production version will have a different control panel on the centre console, improved cabin cooling, more stowage space and minor changes to switchgear positioning.

The prototype is fitted with a development version of the bespoke tyres that Pirelli develops for McLaren's road cars. Around the Yucca proving ground's compact, twisty handling circuit, the test team would like a little more front-end bite, but that will come on later iterations of the rubber.

Secret test track has a natural defence against intruders; most of this bodywork will appear on the finished car

“Although the car is front-end limited right now, it gives an idea of how it is going to be,” says Beale. “There’s an intent that it is going to be more fun and more drift. You can go very fast in some of our products, but this one is about making sure customers enjoy the car even if they’re not Jenson Button.”

One of the stand-out features of the 12C and the 650S was the ride quality provided by their trick hydropneumatic suspension. McLaren wants to ensure the more straightforward system on the 570S offers similar levels of comfort when the driver switches from the more focused Sport and Track modes to the Normal setting.

“The roll bars give it a different feeling to

the cars we have done before,” says Beale. “It’s got the initial turn-in that we want, but we’d like it to be a little freer with the rear. The steering is not overly bitey but has just got a nice feel to it. It loads up quite naturally and feels quite organic.”

We venture out onto the high-speed bowl. The 570S may have less power than a 650S, but it is hard to imagine too many owners wanting more on the public road.

Entry-level model or not, the production car can dispatch 0-62mph in 3.2sec. “In fifth gear and 4000rpm, it has just got that instant pick-up, which for a turbo car is great. The controls team that looks after the engine has done a great job,” Beale says. “We wanted to bring it back to basics

and make a fun car with great feel, keeping the weight down and having a good ride quality.”

To the onlooker, some of the test procedures appear almost sadistic, but McLaren finds lessons in everything it does during these two weeks.

“There is a bit of pain, but it’s nothing compared to the pain we’d feel if we found these issues two months before production started,” says Beale.

“For instance, the very aggressive stone pepping that we get on the car from the desert is way beyond what you’d see on a customer car, but we’ll use that data to make sure our protection strategy matches the worst-case scenario,” he says. “We won’t throw any bits away until we’ve sucked the learning out of them.” **A**

‘THERE’S AN INTENT THAT IT IS GOING TO BE MORE FUN AND MORE DRIFTY’

LIGHTENING STRIKES TWICE

The new Mazda MX-5 has gone back to its roots as a light, compact and fun roadster – in theory, at least. But what's it like in reality on UK roads? **Mark Tisshaw** drives from Glasgow to London to find out

DESIGNED IN THE UK
DEVELOPED AT OUR
NÜRBURGRING
TESTING FACILITIES

The new Mazda MX-5 weighs just 1122kg and is shorter in length than it has ever been in its 25-year history. On paper, it's a belting formula for a rear-wheel-drive sports car.

Mazda's designers, engineers and management have been teasing us with talk of back-to-basics purity for a couple of years now after the MX-5 in its current guise moved further away from its original brief, gaining power but also weight and girth.

Suitably revved up by Mazda's promises, we've driven this new one abroad and it further whetted our appetites. Now, finally, it is with us in Britain – almost. Customer cars are due next month, but we've got the keys to a UK-spec right-hand-drive model for a whole day, with orders to take it from the roof of a multi-storey car park at Glasgow Airport to London. Better get moving.

July's first day is the year's hottest, and as the car park lift doors open, the bright red MX-5 is easy to spot among a sea of battered diesel repmobiles.

Up close, the MX-5 is even better looking. It's beautifully proportioned and has simple curves that make it look more expensive than its £18,495 starting price. Has there been a better-looking Japanese car in the past 20 years? I struggle to think of one.

Snapper Luc's camera gear and our luggage just about squeeze into the 130-litre boot; that's 20 litres smaller than the outgoing car's, but it's a more usable space. We climb in. Those curves over the front arches serve a useful purpose, indicating clearly where those front wheels are. The curves then flow into the cabin, the body-coloured strips along the

top of the door cards creating the impression of a continuous piece of sheetmetal – a nice touch.

Mazda will sell you a new MX-5 with one of two normally aspirated four-cylinder engines: a 129bhp 1.5 and the one we have today, a 158bhp 2.0. Early drives abroad have shown the 1.5 model to be the car in its purest form, but it's no less sweet and certainly not overpowered in 2.0 form.

Perhaps that's to be expected. Mazda has never chased big power outputs for the sake of it. Instead, it prefers to 'right-size' engines in its cars, offering as much power as it thinks we need and no more in an engine of the right capacity for respectable real-world fuel economy.

Engineers say the first few seconds in a car are key to making a driver feel au fait with it – that initial dip of the clutch, throw of the gearlever, squeeze of the throttle, turn of the wheel. Mazda clearly subscribes to the theory. This MX-5 feels as good as anything over those first 50 metres. Today is going to be a good day.

The fun will come later, on the North Yorkshire Moors, but first the MX-5 will be treated to the full gamut of British road conditions and scenarios: a city centre, motorways, fast and slow A-roads, villages, wide and tight B-roads, roadworks, more roadworks and even an almighty thunderstorm. In roadworks.

First up is a run out of Glasgow city centre on motorways and A-roads. It's a chance to test those little things that help to determine whether you should regard the MX-5 as a weekend toy or an everyday proposition you could swap your Ford Focus for.

The low-speed ride in the city is →

This MX-5 is shorter than its forebears; it looks more upmarket than its price implies

The sweet-handling MX-5 comes into its own on roads like this

Best progress relies on higher revs; sweet gearshift is an ally

MAZDA MX-5 2.0i SPORT NAV

Rating	★★★★★
Price	£23,295
Engine	4 cyls, 1998cc, petrol
Power	158bhp at 6000rpm
Torque	147lb ft at 4600rpm
Gearbox	6-spd manual
Kerb weight	1122kg
0-62mph	7.3sec
Top speed	133mph
Economy	40.9mpg (combined)
CO ₂ /tax band	161g/km, 27%

Infotainment system is excellent; hood is a one-handed task

← compliant and you don't bear the brunt of any poor road surfaces. The slightly wobbly rear-view mirror is a reminder that the roof is not part of the structure, but the MX-5 is nevertheless a good case study in how to make a stiff convertible body.

The control weights shine as we drive through the city. The pedals are perfectly positioned and weighted. The short-throw lever of the six-speed manual gearbox is a joy to use. Even the look and feel of the handbrake – a proper old-fangled one at that – is pleasing in a way that I never really thought a handbrake could be.

More points are scored for visibility. Roof down, that's a given, but roof up, the MX-5 offers an outward view that belies the compact nature of the cabin. Getting the roof down and up is a doddle, done by hand (and only one needed at that).

Despite some clever tricks, space is at a premium in the cabin, which is much improved from before in

design and perceived quality. It is snug rather than claustrophobic, but the tightness is felt when, say, using the controls for the excellent infotainment system, some buttons for which are awkward for the driver to reach. Or when a taller driver feels his or her head rub on the roof (best keep it down) or struggles with the lack of reach adjustment on the steering wheel.

We follow the M8 motorway to Edinburgh and then the A68 towards Newcastle, as Scotland and its speed cameras give way to England and its roadworks. A running theme so far is the need to overtake lorries on A-roads; we plan ahead, keep the revs up and pass easily.

At motorway speeds with the roof down, the MX-5 insulates us from the worst of the noise. To have a conversation, Luc and I have to speak loudly but not shout. Roof up, there's wind noise around the pillars, the tyres seem quite noisy and the engine

is fairly vocal at around 3000rpm, but none of these things is particularly grating or prevents the car from being decent to live with on a daily basis. This is a sports car, after all.

After more main roads past sodden Newcastle, Sunderland and Middlesbrough, we reach the North Yorkshire Moors. After seven hours on the road, it's time for our MX-5 – in range-topping Sport trim, which includes a limited-slip differential, strut brace and Bilstein dampers – to prove its sports car credentials.

We pick a road that runs from north to south. Rolling hills, undulating road surfaces and fast sequences of bends are the order of the day here, and the backdrop looks stunning in the early evening sun.

It's a road that requires real momentum to be fully exploited, and the MX-5's longitudinally mounted engine is happy to oblige. This powerplant needs to be revved to have the best extracted from it

because, unlike with a modern turbo petrol engine, you're relying more on top-end power than low-end torque to make progress.

So there's only as much power as you need and no more, although a better exhaust note wouldn't go amiss to at least trick your brain into thinking you're going faster.

Get the entry speed right and this Mazda will reward you with enough power through the corner and out of it. It's never explosive – this is an MX-5, after all – so it requires work and experimentation with the gears to really flow quickly through the corners.

Fast complexes of corners like these, linked by humps and bumps in the road, show the MX-5 in its very best light. There's no rock-solid chassis tuning here, rather one of sweetness and finesse. There's a little wobble in the chassis when a bump disturbs it mid-corner or a crest in the road pops up under braking, but

it's never enough to make the car feel nervous or to cause you to back off.

Find a tighter, twistier stretch of road, though, and it's the steering that really comes into its own. It's an electrically assisted system, but don't roll your eyes. With weight and feel like this, the MX-5 is definitive proof that electric steering can offer a 'pure' driving experience.

The steering makes the MX-5 a pointy car that likes to be turned in rather than chucked in. Yes, you can slide it and drift it and it is adjustable on the throttle and progressive when you do so, but there's far more grip here than in a Toyota GT86 and, as such, the slides require a bit more commitment. So the more satisfying way to drive it is to thread it through the bends and enjoy that precise steering feel and precise handling rather than launch into the corners.

It's on roads like these where the weight distribution of the MX-5 also pays off. A clever use

of materials has allowed a close-to-perfect apportioning of weight in the MX-5, with aluminium used for key structures and bodywork front and rear, to put the main bulk of the weight in the middle of the car. It all makes for a very linear drive, with no lurching around mid-corner or under hard braking.

'Sweet' is the word we keep coming back to when describing the MX-5's dynamic repertoire. Heading down the M1 to London, that word keeps returning as we try to sum up this car. It's sweet to look at, sweet to drive and sweet to sit in. Most likely, it will be sweet to live with, too.

There are many faster sports cars out there and ones that are even sharper to drive, but all are more extreme and, as a result, less usable every day. If you buy into the theory behind the MX-5, you'll love what they've done with this car in returning it to its roots. It feels hearty and wholesome and we love it. **A**

Room for **Improve**

For 50 years, Alpina has been making good BMWs even better, and it isn't about to rest on its laurels. **John McIlroy** reports

ment

Even for a company that has a history of doing things a little differently, Alpina's recent 50th birthday celebrations were a bit out of the ordinary. The specialist manufacturer closed its factory in Buchloe, Bavaria, for a full week. Around 400 guests turned up every night for a string of lavish dinners, and the plant gates were thrown open on a Sunday afternoon for anyone to have a look at the facility and the 20 or so classic models dotted around the place.

It was a confident statement from a family firm that is in a good place. In 2014 Alpina's 220 staff enjoyed the firm's strongest sales year yet, with more than 1700 cars delivered globally – and although the volumes

are expected to shrink a little this year (a result of the 3 Series being facelifted and the 7 Series being replaced), the company's turnover should rise again.

The close relationship with BMW – still unique in the car industry – is as strong as ever. Started when Burkard Bovensiepen developed a twin-carburettor kit for his BMW 1500, the partnership now operates on a rolling five-year deal and includes assembly on BMW's own production lines and its dealers honouring Alpina's warranty. It's a business arrangement – Alpina is charged a storage fee for any parts batches that turn up outside of BMW's 'just in time' production process – but it's very strong. BMW feeds Alpina's →

At its Buchloe headquarters, Alpinas are designed, engineered and built by 220 staff

It takes about five hours to remove the interior trim and eight to 10 hours to refit it

Alpina Classic wheels have a patented design to hide the valve behind the centre cap

Andy Bovensiepen says more Alpina SUVs are likely

← engineers CAD data on upcoming models more than four years before they start production, after all.

And yet for all this stability, there is a feeling of transition at the company. Bovensiepen is a sprightly 79-year-old who still lives in a house on the factory site (the hot gas from one of the engine dynos heats his pool). He splits his time between maintaining what he calls the “fundamental basis of trust” between Alpina and BMW and finding new product for his fine wine business.

But he has recognised that a

longer-term management plan is required, so his sons Andreas (Andy) and Florian now have senior roles. Crucially, they have a majority vote between them, with the potential to overrule their father if they see fit.

It has been used a few times already, too – most notably with the XD3, Alpina’s first SUV, which went on sale last year, much to the annoyance of the company founder. “To start with, my father wanted nothing to do with the project,” says Andy with a wry grin. “He doesn’t like dirty cars, let alone the idea of

an SUV. Then he said he would try it after all. Now all he’ll say is that it’s better than he’d expected...”

The car has been a sales hit for Alpina. Production figures were hampered by a shortage of capacity in Bavaria – not to mention the extra logistics involved in producing the car on BMW’s line in North Carolina – but they’d have sold more if they could have made them.

The next major step will be an entry to the Chinese market, due next year – although if major manufacturers find it difficult to

When Jaguar tried to buy Alpina

ALPINA’S UNIQUE ABILITY to work with a major manufacturer has made it appealing to other brands over the years. Its Japanese importer still politely declines occasional requests from Toyota officials keen to come to Bavaria for “an informal tour of the factory”. But there have been

closer calls over the years – genuine discussions, and flirtations used as bargaining chips with BMW.

When ex-BMW man Wolfgang Reitzle joined Ford’s Premier Automotive Group in 1999, he thought Alpina would be a safe pair of hands for performance Jaguars.

He met Burkard Bovensiepen in London and offered to buy his company for 200 million Deutschmarks (about \$340m). “My father said thanks but no thanks,” Andy Bovensiepen says. “It wasn’t a question of money. It was about the freedom to do what we want.”

set up operations in the region, you can imagine what it's like for Alpina. "Our biggest challenges are the taxes on engine sizes and what we do with local production," says Andy. "We'll probably do a different version of our B7 (7 Series) for China, so while European and American cars will be 4.4 litres, we'll do a 4.0-litre Chinese edition to help with the taxation."

That principle could extend to a straight six version of the 5 Series-based B5, although the complex Chinese business regulations hurt the bottom line. "The rules say that if we build that car in China, we'd have to share the profits not only with BMW but also with Brilliance [BMW's local partner]," Andy sighs. "It's hard enough to make a profit as

'Customers don't want front-wheel drive. They don't want an Alpina version of the Active Tourer'

it is, without dividing it up further."

That focus on the bottom line comes across frequently, in fact. Alpina invests about €10 million (£7.1m) in each new model line, through powertrain development, chassis tuning, aerodynamic research and marketing. So it needs to extract the maximum from every commitment it makes. Indeed, Andy suggests that one of the UK's most popular Alpinas in recent years, the four-cylinder diesel D3, contributed far more to the sales volumes than it did to the coffers.

"There was an opportunity for us to do the four-cylinder diesel with the E90 [previous] 3 Series," he says,

"and we did a single-turbo and then a twin-turbo version. But now with F30/F31 [current 3 Series], BMW is using a hot four-cylinder turbodiesel itself – and while we could take that and have up to 250bhp, it would be expensive to produce and then to sell. To be honest, that was the problem with the four-cylinder before. We tried to do something on price and we know it was popular in the UK, but with the strength of the pound it was hard to make any money on it."

"We've looked since then at a new cheaper model, but our customers are quite clear on what they want. They don't want front-wheel drive. They don't want an Alpina version of the Active Tourer. Those things just aren't going to happen. There is some interest in the existing 2 Series, but only in the coupé – and that makes it hard to justify for us."

The focus, then, will continue to be on higher-end models. And although the patriarch may not like it, they will probably include more SUVs. "I think it's likely," says Andy. "If that's where the market is going, then we have to look there. We haven't decided whether to go for the X4 or something larger, though."

Expansion will require greater capacity, and a spare patch of land at Buchloe has already been earmarked as a potential new manufacturing site. The thing is, though, every Alpina still comes with a dash-mounted plaque proclaiming that the firm specialises in "production of exclusive automobiles". So at what point does it stop being exclusive?

"We have more head room yet," says Andy. "Rolls-Royce made more than 4000 cars last year, so we joke that we're more than twice as exclusive as them. But I think that we could make 2000 or even 2500 cars per year and still our customers would consider us exclusive, as long as we keep giving them a different sort of car and experience." 

B5 Edition 50 marks Alpina's 50 years; just 50 made, two for UK

Six of the best: Alpina's classics

3.0 CSL ALPINA

Introduced: 1972

Production run: 1265

Alpina led the development of this famous homologation special at BMW's request – and built 13 examples in its own specification.

B7 S TURBO COUPÉ

Introduced: 1982

Production run: 30

Imagine a 635 CSI but with a turbocharged straight six and up to 326bhp, depending on how you twiddled the boost knob between the front seats.

B6 3.5 S

Introduced: 1987

Production run: 61

The only Alpina in history to have been based on an M car, this version of the E30 M3 had a straight six engine with 251bhp.

B12 5.7 COUPÉ

Introduced: 1992

Production run: 57

This astronomically expensive two-door had a V12 engine with 410bhp and with a manual gearbox.

ROADSTER V8

Introduced: 2002

Production run: 555

Alpina sold more than 10% of BMW's entire production run of the Z8 – and gave itself a great start in the US market as a result.

B10 V8S TOURING

Introduced: 2002

Production run: 43

One of the classic BMW shapes, enhanced by Alpina's classic alloy wheels and an uprated V8 with 370bhp.

NICOLE'S OPPORTUNITY OF A LIFETIME

For her latest work placement, 2014 Autocar-Courland Next Generation Award winner Nicole Agba has been at Toyota, where she's been involved in preparations for the launch of the Mirai fuel cell vehicle. **Doug Revolta** reports

PHOTOGRAPHY LUC LACEY

The Toyota Mirai is the world's first production hydrogen fuel cell vehicle, and during Nicole Agba's month-long placement with the manufacturer she got a chance to work with the marketing team on the upcoming launch of the ground-breaking car.

Following placements with Jaguar Land Rover and Peugeot, 2014 Autocar-Courland Next Generation Award winner Nicole designed a marketing proposal for the car.

"I was tasked with working out how to present technology and data about the vehicle to companies who will be buying the car and also to everyday consumers," the Coventry University graduate says. "Consumers and the companies have similar needs, so I tried to combine both."

Nicole set about designing a mobile app for the car to provide more information on hydrogen fuel cell technology using videos and images. The app would also offer more details about the car and its history, as well as locations of refuelling stations.

To present the app, her proposal was to have an envelope with a tablet device in the car's glovebox and an electronic business card attached to it.

"It's got a barcode on it that automatically downloads the app for you when you scan it," she explains. "There's also an NFC [near field communication] strip that allows you to tap your phone on it and share data like videos, images, websites and the app with your friends."

Although Nicole had worked on hydrogen fuel cell technology projects at university, she hadn't had a chance to delve into the field in any great detail. Having the opportunity to do so at Toyota has changed her opinion of the technology.

"It's been really beneficial learning the essential facts about hydrogen fuel cells," Nicole says. "After working on this project, I'm actually pro-hydrogen. I wasn't before I'd learnt more information about it here."

Now on her third placement of five, Nicole has been able to draw on her experiences at Jaguar Land Rover and

'THERE'S POTENTIAL FOR TOYOTA TO USE THE APP I DESIGNED AS A PRODUCT'

TOYOTA'S VIEW

'Winning the Autocar-Courland Next Generation Award is life-changing'

ROB GILES, Toyota's HR director, has been on the judging panel for the Autocar-Courland Next Generation Award since 2013 and will be assessing entries again this year.

He's pleased to see how far Nicole has come since winning the award in 2014 and has some important advice for those entering this year's competition.

"This year, what I'm looking for is real innovation," he explains. "Consumer expectations have massively increased in terms of products. People are used to all sorts of innovative products in their home and on their mobile devices, so it's not just a question of what the idea can offer car buyers but also how it can help them with their lifestyle."

"Winning the Autocar-Courland Next Generation Award is life-changing. It opens the winner's eyes up completely to what the industry can offer and, as an HR director, if I saw that on someone's CV, it would make me take notice of the individual."

"Nicole's award-winning biometric steering wheel design from 2014 is a great example to those entering this year."

"The robustness of the proposal is what stood out. It wasn't gimmicky, it wasn't a concept that wouldn't work, and there was a lot of research carried out for it."

"That's what set it apart, and I'm so pleased to see how her confidence has grown during these placements."

Peugeot to help in her work at Toyota. Just as in her other placements, she was given the chance to get stuck into work straight away and found herself outside her favoured field of design and immersed in the marketing side of the automotive industry.

"The Mirai project was intimidating to start with, mainly because it's not a design-focused task," Nicole says. "The skills I've acquired through my experience in design shone through in the overall layout of the design app, though."

"I was given full scope to do whatever I wanted to do, and there's potential for Toyota to use it as a product eventually."

Along with her Mirai project, Nicole researched other Toyota marketing schemes and created her own ideas, which she then presented to the head of marketing at Toyota. There was also time for a trip to the firm's manufacturing plant in Derby.

"I was told that no one has ever described the factory as 'cool' before, but I was like a kid at Christmas," she says. "I'm from a materials background, so being able to see all the steps that are involved in manufacturing, like painting the exterior and how they then injection mould the plastic for the bumpers, was a really fantastic experience."

With exposure to many of Toyota's departments, Nicole has noted a strong ethos that runs through each strand of the company. "Every department has its own 'hoshin kanri', which determines their goals for the year," she explains. "Everyone, no matter their department, has environment at the top. Most of the goals are the same, and it means that everyone is on the same page."

Nicole has enjoyed the marketing aspect of this placement and has taken a lot from it, but her future ambition is still clear.

"I very much know that I want to be a colour materials designer, specialising in materials and exteriors," she says. "My time working on the Mirai has been amazing and it hasn't necessarily swayed that. It's just allowed me to have more knowledge. Everything I have learnt here with Toyota I can take into design."

It has been another varied and enjoyable placement for Nicole, and a month with McLaren is up next.

To find out more about how to enter the 2015 Autocar-Courland Next Generation Award, visit autocar.co.uk/nextgenerationaward.

AUTOMOTIVE

Bentley Continental GT3-R

Racing success inspires a more hardcore take on the Continental GT

MODEL TESTED GT3-R

- Price £237,500 ● Power 572bhp ● Torque 518lb ft ● 0-60mph 3.7sec
- Fuel economy 17.7mpg ● CO₂ emissions 295g/km ● 70-0mph 44.3m ● Skidpan 1.01g

The subject of this week's road test is emblematic of Bentley's growing confidence and prosperity. The Continental GT3-R is, in Bentley's words, "the most dynamic, responsive and involving Bentley road car ever". It is also a £240,000 Continental. Even a company as illustrious as this needs to be in chest-thumping mode to consider pushing the boat out so far.

But the significance of the GT3-R extends beyond the obvious. It's now more than a decade since Bentley's Speed 8 won the Le Mans 24-hour race – an absence from international motorsport evidently considered

WE LIKE Blend of excitement and refinement ■ Supercar-level performance ■ Opulent, immaculate cabin

● A subtle homage to the huge front splitter on the GT3 racer, but still a brave addition to a Bentley road car. It actually looks relatively conservative.

● Radiator grille, headlight surrounds and window and bumper trim are all in gloss black. A harsh contrast with the white paintwork, but that was probably the look Bentley was aiming for.

● Black machine-forged 21in rims wear Pirelli P Zero tyres. Huge carbon-ceramic brake discs and eight-piston calipers are standard.

● These carbonfibre slats are one of the less well-judged styling additions, particularly given that the enormous bonnet onto which they are tacked is still a heavy superformed aluminium panel.

long enough by Crewe's top brass and parent company Volkswagen.

That's because, after being shown in concept form in 2012, the firm's Continental GT3 endurance racer led it back onto the track last year. Out of the box, it ended an 84-year wait for a Bentley motorsport win on British soil when the Blancpain Endurance Series visited Silverstone. It also scooped a win in the same series at Paul Ricard, won the Pirelli World Challenge at Miller Motorsports Park in the US and successfully completed an eventful 24-hour race at Spa.

You could call that a successful maiden season. Bentley certainly

GT3 racer's success inspired the GT3-R

would. It's also seen as justification for the introduction of a road-going tribute to that success: the limited-run Continental GT3-R.

The importance of this car is easy to overlook on paper but less so in

the metal – at least judging by the motorsport-inspired styling. Crewe has launched extra-punchy GTs before, and both the W12 GT Speed and the old GT Supersports make more power than this. But neither was so single-mindedly designed to deliver speed, agility and driver thrills.

Never has Bentley attempted to make such a purposeful driver's car as this – and never has it considered one of its cars worthy of an identifier as baggage-laden as 'GT3'. So what results: a proper track-day car, a piece of two-tonne carbonfibre-clad tokenism, or something in between?

DESIGN AND ENGINEERING

A hardcore Bentley performance machine is a concept shot through with contradictions from the start. Anyone inclined to dismiss this car without giving it a fair hearing will need to look no further than its kerb weight for justification. Bentley's official claim, including the 75kg allowance for a passenger and luggage mandated by the EU standard, is 2195kg. On MIRA's scales, our test car showed 2285kg →

WE DON'T LIKE Sense of untapped potential ■ Neither lithe nor lively limit handling ■ Overcooked styling

● Rear wing is a lovely piece of mirror-matched lacquered carbonfibre. Whether it belongs on a Bentley Continental GT is open to debate.

● The 'GT3-R' graphics over the rear haunches are a no-cost option, but the green highlights, like strokes of the designer's pen, aren't. They probably looked better on the sketchpad.

● The LED tail-lights have smoked black surrounds, just like the headlights up front. Very nice, and just the kind of visual subtlety Bentley should be dealing in.

● Normal GT V8 S gets chrome exhaust trim in a sideways figure-of-eight shape; GT3-R gets a titanium exhaust with separated quad pipes. Diffuser is the same as the V8 S's.

● There's a hole for the key, which can be used to start the car if you wish. Or you can treat it like the relic it is and simply hit the starter button.

● The engine only comes in one profligate state of tune, but this button lets you fiddle with the suspension through five stiffness settings.

● You can't see the GT3-R's column-mounted paddles from the straight-ahead, but they're fairly well placed and big and brutish to use.

MULTIMEDIA SYSTEM

When you press the damper button to stiffen the suspension and then have to move your hand up to the touchscreen to actually adjust the firmness via a low-res slider, you get an idea of how far Bentley still has to go with its electronics. Aston Martin and Rolls-Royce have, in their time, been limited by the slickness of the systems inside them, but there's little excuse for discovering that a Volkswagen Golf has a quicker and more responsive system than Bentley's flagship car. Still, it all works, if slowly and clunkily, and the hi-fi quality is impressive.

← with its 90-litre tank full of fuel. Too much for a great driver's car? We'll come to that.

The more important question is whether Crewe could have done more to save weight without compromising on the material lavishness and silver-tongued luxury on which every Bentley trades – and extended experience of this car makes it a hard one to answer.

Having started with a Continental GT V8 S, Bentley threw out the car's back seats and fitted new, lighter front ones. It also replaced the interior doorcards with carbonfibre alternatives, found a titanium exhaust for the car worth a 7kg saving all on its own and fitted lightweight machine-forged 21in alloy wheels and carbon-ceramic brake discs as standard.

Altogether, the GT3-R's diet amounts to a 100kg weight loss, but the car still comes with a double-glazed glasshouse, thick aluminium body panels, a relatively heavy and complex air-sprung suspension system, four-wheel drive, massager seats and a motorised bootlid. Some of that may be indispensable to any modern Bentley, but equally, our sources suggest that the engineers' weight-saving mission ran out of

time before it ran out of opportunity.

The mechanical changes to the car aren't earth-shattering, but there's a promising, businesslike directness about them. The car is powered by the twin-turbocharged 4.0-litre V8 engine from the GT V8, because that's the basis of Bentley's racing engine – and since we prefer it to the older W12 anyway, it's good news as far as we're concerned. New turbos produce peaks of 572bhp and 516lb ft from it, up from 521bhp and 502lb ft in the GT V8 S.

Just as importantly, a shorter final drive ratio (3.5:1, down from 2.85) for the eight-speed automatic gearbox makes for even more greatly enhanced sprinting potential than the power hike alone implies. While the GT V8 S pulls just under 45mph per 1000rpm in top gear, the GT3-R pulls only 37.6mph. Top speed is reduced to 170mph as a result.

The car's air-sprung, adaptively damped suspension has been retuned, but it's otherwise carried over from the V8 S – which seems something of a disappointment. But the car's stability control software has also been retuned, not to mention augmented to make the GT3-R the first Bentley to feature torque vectoring via the brakes. The →

● Not a huge amount of space for such a big car. Prop something behind the seat and taller occupants will find themselves uncomfortably close to the dash.

● The absence of rear seats reduces the car's practicality somewhat, but the GT's rear pews were always more emergency option than serious prospect.

● The Continental's boot isn't as capacious as that of a BMW 6 Series, for example, but it's roomy enough to swallow a weekend's worth of luggage.

HOW BIG IS IT?

VISIBILITY

Large car, large pillars. We'd take a few options off this Bentley, but parking sensors aren't among them.

HEADLIGHTS

Superb on dipped beam, even better on high beam.

WHEEL AND PEDAL ALIGNMENT

Dead straight wheel and a broad driving position are suitable for the most heavyweight of oligarchs.

← standard four-wheel drive system, which splits power 40/60% front to rear by default, remains.

INTERIOR

★★★★★

It's almost impossible to sit in a Continental GT now without musing on its age. Previous to the Volkswagen Group's overlordship, an elderly Bentley could be appreciated like a first-edition book or a vinyl record cover, the leather and wood absorbing time and patina as if layered onto it like so much French polish. The GT, though, is far too modern to grow old so gracefully. Instead, it's rather like watching an effects-laden blockbuster from the late 1990s: everything is recognisably in place, yet also now very clearly out of date.

Bentley knows this, of course, and so with the GT3-R it does what it has

been doing for the past half decade and dazzles you with its lavish materials and fine craftsmanship. And even in 2015, it does that to intoxicating effect.

The cabin's chief difference, though, is to be found directly behind you, where the rear seats have been plundered in the interests of weight reduction. But that paring down extends to almost nothing else in the cabin. Yes, the door casings are made from rather beautiful lacquered carbonfibre, as are some of the fascia panels elsewhere, but that's worth about as much in the GT's case as titanium earrings on a hippo.

Quite obviously, the cabin architecture behind it all – and the level of kit on top – hasn't been asked to shed a solitary gram. Even the new, bespoke sport seats, dropped in for their additional support, appear to be the racing bucket equivalent of La-Z-Boys. Except that nothing originating from the United States

has ever been as well stitched together as these – the leather and diamond-quilted Alcantara being almost as satisfying to pore over as they are to sit in.

That, in a nutshell, describes the wonderful incongruity of the GT3-R: it's trying to be at once plumped up and pared down. Entire swathes of tactile hide – some of it dyed a zesty shade of lime green – decorate the dashboard, and it's all very nice indeed. But the inescapable fact is that Bentley has treated its matinee idol to an injection of Botox, where some will argue that industrial-level liposuction was called for.

PERFORMANCE

★★★★★

Just when you thought that making a regular Continental GT travel from 0-60mph in 4.5sec was impressive, along comes the GT3-R. The

GT3-R's weight may yet hold it back from being all the driver's car it could be, but one thing it doesn't do is prevent it from being devastatingly accelerative.

Partly that's due to the 572bhp that the 4.0-litre V8 develops, but at least as much is a result of the lower gearing. Yet still there's no launch control at work here; you simply tense the transmission by easing the accelerator down a touch with the brake pedal applied, then remove your left foot from the brake pedal and stamp the throttle down to the floor with your right foot.

If you have the space and nerve, 60mph will pass just 3.7sec later, which is the fastest time we have ever recorded for a car that weighs more than two tonnes (the Bugatti Veyron Super Sport sneaked just 5kg under that), and the weight doesn't hold it back much after that, either. The Bentley passes 100mph in only 8.2sec and completes a standing

ON THE LIMIT

The big Bentley hauls off speed remarkably well. Its standard carbon-ceramic stoppers will resist fade for about four laps of our tough handling circuit, which is a particularly good showing given the engine's potency and the car's overall weight.

It's not agile on turn-in by race-inspired standards, but few cars weighing this much have such keen responses. Its body settles quickly and can absorb mid-corner bumps without being pushed off line. And from then on, driven smoothly, it largely settles into a stable, confident cornering attitude, not easily thrown around by throttle lifts, bungs or other inputs.

It will eventually nudge into understeer, although you can use the body weight to sidestep that and set it into oversteer on turn-in, after which the power will help to pull it straight with confidence. There's precious little to worry about here and quite a lot of reward to be had.

DRY CIRCUIT

Bentley Continental GT3-R
1 min 15.5sec
Ferrari F12 Berlinetta
1 min 08.6sec

That the GT3-R is slower around our handling circuit than an F12 is about as surprising as finding it gets dark at night. But it's a fairly entertaining steer anyway.

WET CIRCUIT

Bentley GT3-R
1 min 20.4sec
Ferrari F12 Berlinetta
1 min 22.9sec

The security of four-wheel drive means there's no problem using the GT3-R's considerable power everywhere, but it can be playful if you ask.

ACCELERATION 19deg C, dry

Standing quarter mile 12.0sec at 120.5mph, standing km 21.6sec at 155.1mph, 30-70mph 2.9sec, 30-70mph in fourth 4.4sec

Ferrari F12 Berlinetta

Standing quarter mile 11.0sec at 133.6mph, standing km 19.7sec at 169.8mph, 30-70mph 2.3sec, 30-70mph in fourth 4.6sec

BRAKING 60-0mph: 3.0sec

Stiffer springs all round help to contain GT3-R's two-tonne-plus mass

The ride is little worse than that of a standard GT, which means the GT3-R is a fine car to drive over distances

quarter mile in 12.0sec precisely. That latter time is a second clear of a Mercedes-Benz S63 AMG Coupé and only a second slower than a Ferrari F12 Berlinetta, which, remember, has more than 700bhp and weighed in at only 1630kg on our scales. Such are the benefits of the Bentley's broad powerband and a four-wheel drive system that can vary the amount of power it sends to the front wheels to between 15% and 65% of the total. There is simply no tyre slip under even maximum acceleration.

There is, however, no shortage of drama. This is partly because you're shoved firmly into the seats and destined to remain pinned there until the speedo reads well into three figures, but it's also because, although the GT3-R will not spoil Bentley's reputation for refinement, in removing some noise insulation and installing the titanium exhaust, the V8 engine has been allowed to emit a bit more of a bellow as it makes its way towards its 6200rpm redline. It doesn't do that without turbo lag, even at higher revs, but such is the torque and power when it does arrive that you will never feel short-changed by the response.

The automatic gearbox keeps up with it admirably and is more responsive than the large, old-fashioned gear selector and huge, column-mounted shift paddles suggest that it's going to be. The brakes are strong, too, as well they might be, given the weight they have to retard time and again. The GT3-R, despite its name, is not really a track car, but they stood up to the abuse of our handling circuit remarkably well.

RIDE AND HANDLING

★★★★☆

Bentley's engineers have one of the harder jobs in motoring, because they make heavy cars that are meant to be both luxurious and sporting and whose top speeds usually start with a two. Marrying those things isn't without compromise, so it's a credit to them that the GT3-R is as pleasing to drive as it is and that it rides as well as it does, particularly given that – in order to retain decent control – they've stiffened the front spring rates by 45% and the rears by 33%.

The damping stiffness can still be varied from the cabin, and while

ideally you'd want the body control from its firmest setting yet the comfort of the softest setting, a point somewhere in the middle does an extremely good job. The ride is really little worse than that of a standard Continental GT, which means the GT3-R is still a fine car to drive over distances, absorbing bad surfaces well and putting up decent resistance to undulations, crests and dips.

Naturally, it's stable at higher speeds, too, with middling-speed and confidently weighted steering that's solid and moderately responsive. Given where the GT3-R could have ended up, it's an impressive piece of dynamic kit.

BUYING AND OWNING

★★★★☆

While it's important to take a critical view and to benchmark cars like the GT3-R, this test will be of limited use if you're only now deciding that it's exactly the sort of machine that's been missing from your motoring life. The production of 300 cars is now all but run, the entirety of the UK's allocation (34 cars, according

to unofficial sources) is sold and only a handful of unsold examples remain in franchise stock around the world. So while the idea of importing a right-hand-driver from, say, Japan or South Africa wouldn't be out of the question for anyone well heeled enough to afford the car's £237,500 asking price in the first place, the plain truth is that even abroad you'll be very lucky to find a Bentley dealer with a GT3-R to sell. And unlike with the Continental Supersports, there will be no convertible version.

The GT3-R's price tag plainly reflects the situation Bentley found itself in after the abundance of interest shown in the original GT3 concept of 2012. A 40% premium over even a W12 GT Speed is a big one for the Continental – but the rate at which Bentley has sold the cars would suggest that it's not too big. Limited supply should keep residual values higher than the GT's normal standard, but exactly how much higher remains to be seen.

That question will certainly be a bigger one for GT3-R owners than whether they'll get 20mpg on a mixed run. For what it's worth, our testing suggests that they won't. →

TECHNICAL LAYOUT

The twin-turbo 4.0-litre V8 sits longways under the bonnet, driving all four wheels via an eight-speed automatic gearbox and a Torsen centre diff capable of sending anything from 15 to 65% of torque to the front axle. Torque vectoring via the brakes is across the rear axle only. All-independent suspension features air springs with adaptive damping.

Bentley Continental GT3-R

AUTOCAR VERDICT ★★★★★☆

As impressive as the regular Continental GT, but it could be so much more

The GT3-R's spring rates are massively stiffer than standard and it has been lowered by 10mm. It's built in limited numbers and all are sold. The GT3-R's dynamics, frankly, could have taken quite a dive and it wouldn't necessarily have mattered had Bentley shrugged its shoulders and said: "Well, it's authentic to the racing car." Buyers would still have been satisfied.

So it's a credit to Bentley that it didn't do that and the GT3-R drives as well as it does, but it's still difficult to shake the feeling that the car isn't quite all it could be. Yes, it's pleasing to drive, and usefully keener than a regular GT, but it still weighs more than two and a quarter tonnes. An even lighter, even keener GT would be more authentic to the race car and more rewarding still. However, while to us it feels like the answer to a question no one asked, apparently 300 people are keen enough to know the answer, which makes it another motorsport-inspired Bentley victory.

TESTERS' NOTES

NIC CACKETT
The column-mounted gearshift

paddles are huge, but a stretch from the wheel for some of our testers.

MATT PRIOR

I'm no expert, but if you want

a Bentley with 'GT3' written on it somewhere, do you really want a bootlid that closes itself?

SPEC ADVICE

Nice and simple: you can have any colour you like, as long as it's Glacier White. 'GT3-R' body decals can be deleted.

JOBS FOR THE FACELIFT

- Remove more weight, please.
- Drop the air suspension for a lighter, adaptively damped steel coil solution, for better driver feedback.
- Take out the front driveshafts. If this is a true driver's car, dare to make it rear-wheel drive.

Verdicts on every new car, p70

Clear of the pack on performance and thrills. Not as lavish or laid back as some but still brilliant.

★★★★★

Beautiful and characterful, with handling expertly balanced between GT and sporting roles.

★★★★★

Still the sweet spot in the Continental range, GT3-R included. And genteel with it.

★★★★★

Remarkable four-seat, all-paw usability from Maranello. Not as great to drive as the F12.

★★★★★

A bit soulless next to exotic rivals but very thoroughly executed. Beats the S65.

★★★★★

LETTER OF THE WEEK

Alpine needs a GT86

A question posed in the 17 June of Autocar issue was 'Does the world need another £50,000 sports car?', regarding the relaunch of Renault's Alpine brand.

Having seen the official pictures, my answer would be a disappointed "no". The sports car market is fierce enough for those manufacturers with heritage, expertise, the right badge and seductive good looks. A bland pastiche of 1990s Japanese coupés just isn't good enough for this sort of price.

Renault has surely erred by not following an obvious path: make a good-looking, driver-focused, affordable sports car that will appeal to enthusiasts without deep pockets. In short, make a rival for the Toyota GT86.

Scott Bennett
via email

WIN

Letter of the week wins a ValetPRO exterior protection and maintenance kit worth £58.95

Valet PRO
PROFESSIONAL VALETING SUPPLIES

THE RIGHT FORMULA

How ridiculous that F1 looks more than likely to stick with 13in wheels and little tyres. I'm fed up with reading about 'how to improve the spectacle' when in one fell swoop it could be pretty well resolved by going back to the enormous wheel and tyre combinations of the 1970s and 1980s. This plus 1000bhp, like the old turbo days, and you've cracked it.

K Gaulton
via email

CAR CONTRASTS

I was interested to read Steve Cropley's comment on the Vauxhall Viva that he could do all of his annual motoring in such a car (A Week In Cars, 17 June).

As a career petrolhead, I'm sure Steve means what he says. The Viva is simply the latest in a long list of budget cars to receive high praise from Mr Cropley.

Steve, how about passing the Ferrari

FF keys to other staffers and sharing your experiences of a year in a Viva?

Steve Butterworth
via email

Mr C is already oscillating between the FF and his Suzuki Celerio long-term test car, which we hope you'll agree covers a fairly broad base – MB

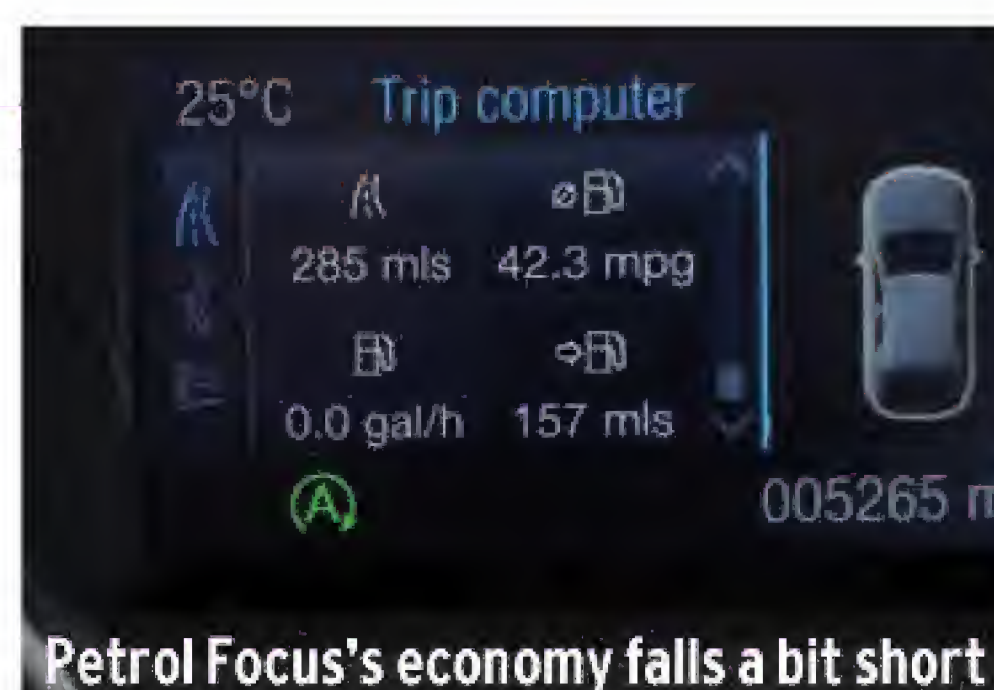

FOCUS GROUP

After reading about the fuel consumption of your diesel Ford Focus (Our Cars, 17 June), I thought I would show you my petrol equivalent: a 125bhp 1.0-litre Focus (see right). It is virtually identical in trim, but running 18in wheels.

Derek Hodgson
Caerphilly

YOUTH DRIVE

Motor manufacturers spend millions to promote brand awareness and desirability. It is interesting to gauge

Petrol Focus's economy falls a bit short

how desirable some brands are to young eyes who have little appreciation of the technical aspects beneath the styling.

My five-year-old son has always been car mad and is now able to identify most vehicles on the road and in Autocar.

After being told he's unlikely to be in the market for a Veyron or Bentley when old enough to drive, he has settled on a Ford Fiesta as his first car, rejecting the offer of my wife's Fiat Panda.

He most gets excited about Porsches.

Particularly insightful is his exclamation of an "olden days car" whenever he sees any pre-XF Jaguar, namely an X-Type, S-Type or X350-model XJ.

Paul Levio
via email

SEVENTH HEAVEN

Congratulations BMW – the new 7 Series is beautifully executed and encompasses the quality, style and class a large premium saloon should have (News, 17 June). Not that I'll ever buy or need such a car, but praise where it's due, especially considering some of BMW's current ugly ducklings.

Philip Lunn
Tunbridge Wells

HOW OLD IS YOUR CAR REALLY?

In December 2013 I bought what seemed to be a nine-month-old, March 2013-registered Lotus Evora S, on a

So Alfa is going to be revived by a car that looks like a Jag/Mazda/3 Series hybrid? Oh dear.
typos1

A reborn Ferrari Dino could be a true driver's car

Thumbs up from Philip for the new BMW 7 Series

13-plate and with an HPI check that stated year of manufacture to be 2013.

Sixteen months and 5000 enjoyable miles later, when offering it as a part-exchange, I was told it was not a 2013 model, nor even the 2012 facelifted one.

Following a call to Lotus, which was super-efficient at responding to my request for a date of manufacture, I was told it was signed out of the factory in February 2011. It was more than two years older than I was led to believe by a non-franchised Lotus specialist.

This isn't unique to Lotus. Buyers of cars that got caught up in the slow sales period of 2008-10, or merely of current slow-selling new models, should be vigilant. You may be buying not just an older car than you think but even a previous model that has sat for a couple of years before being registered.

Tony Robinson
West Sussex

JUNIOR GROWS UP

The Lamborghini Huracán LP610-4 has 602bhp, does 202mph, hits 62mph from a standstill in 3.2sec and costs £180,720 (First Drives, 17 June). You refer to it as a 'junior supercar', but exactly which part of this is junior?

David Priddy

Datchet, Berkshire

It's all relative, but the Huracán is less extreme than the Aventador – MB

BE SAFE AND SEEN

You describe the Toyota Avensis as 'safe' (First Drives, 17 June). Safe, no doubt, to have a crash in, but safe also to drive? My experience is different.

I hired an Avensis estate for a holiday. Its weaknesses, and I suspect those of its competitors, are that the driver has only an approximate idea where it is on the road, because the front and rear ends and sides are out of sight, and that its massive A-pillars and badly placed (driver's side) B-pillar obstruct at junctions, where a motorbike, car or small van might be approaching.

Nevertheless, it ticks all the Euro-boxes and is described as safe. In contrast, my Land Rover Defender, which ticks few of those boxes, lets the driver know precisely where it is on the road.

Echoing what Jon Wright wrote in the same issue, we have satisfied the health and safety bureaucrats but lost sight of a most important aspect of real safety.

Toyota GT86

FINAL REPORT We knew Toyota's affordable rear-drive coupé was a cracking thing to drive, but we had no idea it would turn out to be so practical over the course of a year and 32,000 miles

It's standard to end a long-term farewell report with the words 'I'll miss it', or something like that. I remember – although for the life of me Google can't find evidence of it – that it's apparently quite common that a pilot will say their favourite aircraft is the one they're currently flying, and I think the same phenomenon applies to the

cars you drive. You get into its way of doing things, and something new feels inherently weird after that.

The Toyota GT86, then, has just returned to its maker. And, yes, I might as well get it out of the way nice and early: I'll miss it. But I'm pretty sure I'd say that after having a GT86 for a week, or a day, or an hour, let alone a year in

which I've covered 32,300 miles in one.

That's since it arrived with us this time last year, barely out of its running-in period, and I guess I've driven most of those miles. That's quite a long time to get to know a car and get familiar with its way of doing things (as well as a fairly eye-opening reminder of how many miles your trusty road testers cover

annually, given that I can't have done any more than 50% of my total driven miles in it last year).

Granted, the GT86 – a small, naturally aspirated, rear-driven 2+2 coupé – isn't the obvious choice for covering grand distances, at least on paper. But of all the long-term cars I've run during my decade at Autocar,

LOVE IT

LOW WEAR AND TEAR
Tyres and brakes resist abuse well. We got through a set of rears, but that's all.

DEALER SERVICE
Visited Toyota Oxford three times, and each time they were quick and efficient.

FUEL ECONOMY
Drive slowly on a motorway and you can push to the other side of 40mpg easily.

WILLING ENGINE
Peak power is at 7000rpm but it spins to 7400. I never wanted for more poke.

LOATHE IT

ROAD NOISE
At high speeds, road noise drowns out the stereo and hands-free calls are tricky.

PREVIOUS REPORTS

16 Jul 2014, 30 Jul, 27 Aug, 17 Sep, 8 Oct, 29 Oct, 12 Nov, 26 Nov, 31 Dec, 21 Jan 2015, 11 Feb, 4 Mar, 25 Mar, 15 Apr, 13 May, 10 Jun

few have been easier to live with.

I know it sounds strange to be espousing the relaxed cruising virtues of a car that has been developed with precisely the opposite in mind, a car whose engine spins audibly at around 3000rpm at 70mph, whose ride is firm and whose cabin noise is as loud as you'd expect from a car that weighs just 1235kg.

Thanks to the purity of its design, this is a remarkably accommodating car. It's narrow and compact, for a start, which makes it excellent in town. Its driving position is dead straight, its seats are supremely comfortable and supportive, its pedals are perfectly spaced and the gearshift is easy and slick.

To my mind, all of these little things matter a lot more than a few ounces of soundproofing. They're what make the GT86 more relaxing to drive over

Thanks to the purity of its design, the GT86 is remarkably accommodating

long distances than, say, a Renault Mégane RS, or a Peugeot RCZ, whose pedals aren't so comfortable, making it more draining despite it being both quieter and plusher.

The GT86 is also quite practical. One of the reasons it doesn't weigh much is because there's not much metalwork, which in turn means that there's a surprising amount of space in the +2 rear seats. Four adults have travelled in this car on occasion, and I've regularly taken three children to secondary school in it. The rear backrest folds, too, and although the GT86 has a bootlid rather than a hatch (partly for lightness), you can thread sizeable

loads into it. It's even economical. It's meant to return 36.2mpg on the combined cycle, but I regularly beat that, managing 37.2mpg overall during the car's time with us.

It does like to be looked after, though. In 30,000 miles, a GT86 will want three services – interims at every 10,000 miles and major services every 20,000. Many owners won't want more than one per year, I suppose, and they're not bad value: £179 for an intermediate one, £299 for a full fettling. They're a fixed price at any Toyota dealer, so it's not worth shopping around. Our car wanted a smidgen of oil very early on, and nothing else afterwards apart from new

rear tyres at around the halfway point.

And away from all of that, there's the rest, the bits that make up for the compromises. The GT86 has never been anything less than thrilling to drive when the right road (or track) appears. No sooner had it arrived than we threw it into a feature we call Junior Handling Day (where it finished on the podium), and later in the year we used it in a 'best in the wet' test (where it didn't). But wherever it went, whichever tests we took it along to, it entertained everyone who drove it on test or commuted away in it afterwards.

A couple of weeks on from its leaving, my favourite car is still this, not the one I'm currently driving, and I can see it staying that way. The GT86 is one of those rare cars I drive in this gig: if I had a proper job, it's the one I'd buy. matt.prior@haymarket.com

REARGUARDS

- A practical, simple and stylish solution to cover unsightly scuffed and scratched rear bumper tops
- Hides old paint scratches and prevents new ones which avoids very costly bumper repairs!
- Protects paintwork when loading or unloading the boot
- Quick and easy DIY fit using **3M** self-adhesive tape
- Individually tailored and moulded in recyclable ABS plastic with 4 colour options: Black, Silver, Carbon Look and Brushed Alloy Look
- New models constantly being added
- Looks like an original factory fitted product
- Designed & manufactured in the U.K. by **RGM**
- **NEW STAINLESS STEEL APPLICATIONS NOW AVAILABLE**

Incredibly easy to fit. An excellent accessory! Thank you Rearguards!" **Mr D.R. Ford Kuga**

"I was pleased to receive my Rearguard so quickly because my Ford Kuga's rear bumper was recently badly scratched and damaged in a car park (by a hit and run driver). To replace it would cost £100s. Rearguards cover up all the damage. It looks part of the

"Every VW driver should have RGM Rearguards to protect their painted rear bumper."

**Neil Birkitt, Editor,
VW Driver Magazine**

"Just taken delivery and fitted Rearguards to my C3 Picasso. Brilliant! It took me about two minutes and it fits perfectly."

Mr B.Stevens. C3 Picasso

"Just fitted Rearguard which arrived today for my Sandero Stepway. Absolutely brilliant. Blends in so well with rest of car's trims."

Mr D.F. Dacia Sandero Stepway

Mr R.J. VW Golf Mk7

"Thanks for sending the carbon-look Rearguard for my Mk7 Golf. It's fabulous - it does exactly what I needed, as the sill is particularly prone to damage. I don't understand why manufacturers don't fit something like it as standard equipment."

Mr M.R. BMW 525 SE

"Today I received my Rearguard for my 2011 BMW 525 SE and I'd like to say a Big Thank You. It covers the scratches on top of the bumper and it makes the rear of my car look even more upmarket. The Lady I ordered it from on the Phone was Extremely Helpful and Friendly, a credit to your company. Now I've fitted Rearguards it makes me wonder why they're not standard on all new cars. You have a great Product and I wish you every Success for the Future."

If you'd like a free brochure, just ask. If you place an order and you would like us to fit your Rearguard, pop in and we'll do it for free. If your car's not on our list, call us and we might make one especially for you!

Volkswagen Golf R

Mileage | 3160 Our mega-hatch has been proving that it can do humdrum chores as well as providing hardcore thrills

Various spring-cleaning and gardening projects in the Muir household have put the Golf's practical side to the test in recent weeks. None of it has been particularly challenging, truth be told, but it's still pleasing to know that something as fast and rewarding to drive as the Golf R can also handle mundane, everyday jobs as easily as any other five-door hatchback of its size and significantly more capably than some of its more uncompromising rivals.

Fold the rear seatbacks down and the Golf's 380-litre boot expands to a respectable 1270 litres, with a 1630mm-long load floor (according to our road test) – more than enough for most of my needs. Ridding my garage of a decade's worth of empty cardboard boxes and other junk and stocking up on shrubs did involve multiple runs to

the recycling and garden centres of the Twickenham area, but only on one occasion did I find myself wishing that we had the estate version of the Golf R instead of the hatch, when I needed to collect four chunky 1.8-metre-long garden sleepers from Wickes. For this job, I had to call upon our long-term Skoda Octavia Estate instead.

Practicality may be no different from that of other five-door Golfs, but one area in which the R version easily surpasses its less performance-orientated siblings is the noise it makes. When you consider how anodyne most modern four-cylinder engines sound, the throaty warble that the Golf R makes under acceleration is always a welcome accompaniment to brisk progress, even if it isn't entirely natural. It's almost as though Volkswagen set out to reproduce the evocative

induction noise made by a pair of old-school side-draught carburettors.

Having said that, I find it slightly strange that no exhaust noise is audible from inside the Golf's cabin – not to my ears, at least. Even on a relatively mature hot hatch like the Golf R, some crackles and pops on the overrun would have been appreciated.

The quietness of the car's exhaust is ironic, given that there are not one or two but four tailpipes poking out from beneath the rear bumper. That's a reasonable number even for a large, V8-engined Jaguar or Mercedes-AMG product, but on a four-cylinder Golf it could be construed as over-compensating for something – even though there's no need on a car as swift as the Golf R. It's a shame VW didn't stick with the two round central exhausts of the Golf R's two

immediate predecessors, if you ask me.

The refinement and flexibility of its powertrain and a compliant ride do much to bolster the Golf R's credentials as a long-distance cruiser, but those attributes are offset somewhat by the amount of tyre noise generated at motorway speeds by the Bridgestone Potenza RE050A rubber that the Golf R usually comes with when fitted with optional 19in wheels, as our car is. I'm not the best judge of road noise, because my hearing is mildly wonky, but the Golf R does seem to produce an annoying amount of tyre roar on typical coarse British motorway surfaces. And the fact that it's a subject of some debate on owner forums suggests that I'm not alone in thinking this.

Although the Potenzas provide the Golf with all the grip it needs, I can't help but wonder what the car would be like on a set of Michelin Pilot Super Sports. Even grippier and probably quieter, I suspect. If we were keeping the Golf for longer than nine months, I'd definitely be giving the Michelins a try when the time came to replace the tyres.

In the meantime, I guess I'll just have to steer clear of motorways as much as possible and stick to the twisties, where the Golf R is at its sweet-handling best. That won't be a problem in the slightest. allan.muir@haymarket.com

Bridgestone-shod 19in wheels generate a lot of noise at speed

Actual range will vary depending on driving style and road conditions. 5. CO₂ Emissions: 44 g/km.

THE LOG BOOK

Hyundai i20

Mileage 5103 Last seen 10.6.15

The i20's 1.4-litre petrol motor has loosened up nicely now the car has covered more than 5000 miles. The throttle response is slightly sharper and it doesn't sound so crude while getting up to temperature. Combined fuel economy is still an issue, though. I'm struggling to better 42mpg even with plenty of time spent on motorways. **AS**

Audi TT

Mileage 7902 Last seen 3.6.15

On a trip to the Isle of Wight Festival, I found out three things about the TT. First, the S line suspension and 20in wheels aren't cut out for the badly surfaced island roads. Second, the S tronic gearbox lags behind too much for my liking. Third, the boot is surprisingly roomy, swallowing all of our essential festival paraphernalia. It's a great car but, in this spec, not my favourite. **MF**

Suzuki Celerio

Mileage 1880 Last seen 24.6.15

The Celerio is approaching 2000-mile checkover time. It's an unusual procedure for a modern car; Suzuki calls it an 'optional free first service'. You get a stamp in the book, but it's a while-you-wait procedure that only involves basic checks. Still, I'm getting it done. I like the idea of an expert eye on the car while it's still in the running-in phase. **SC**

Renault Twingo

Mileage | 2710 We've been getting to grips with our cute city car's connectivity options

One of the first things you notice after getting into the Twingo is some black plastic jutting out of the dashboard in front of the radio. Passengers are always confused by it and reckon it looks out of place. However, when I plug in my iPhone, they see what it's for.

While some car makers have placed the smartphone cradle on top of the dashboard, Renault has sited it in the centre, a bit lower down. That makes it easier to reach the phone without stretching, but the downside is that it blocks some of the radio controls.

To go with the smartphone holder, Renault has developed a free app, R&Go, which you download to your phone and then connect to the car via Bluetooth. A list of compatible phones is available on the Renault website. I'm running an iPhone with the latest operating system and it works fine.

When the Twingo first arrived on the fleet, I downloaded the app and connected the phone to the car, excited to try out this new infotainment option. Unfortunately, my first attempts were not very successful or pleasing. The supplied cable wouldn't charge my phone, the Bluetooth telephone function didn't recognise voice

Cradle puts the phone in reach but restricts access to the radio

commands and the maps continually froze, rendering the system useless. I ended up deleting R&Go, buying a cheap Bluetooth headset on the internet and plugging my phone in using a different cable to charge and listen to music.

However, I noticed recently that the R&Go app had been updated, so I gave it another go. I'm pleased to report that it's much better second time around.

The biggest improvement has been to the sat-nav function. It no longer freezes the phone, which is a great start. It's a free service that allows the user to enter full-length UK postcodes – even some built-in systems still can't manage that – and gives clear voice commands as well as traffic information. I was impressed.

I also like how easy it is to choose music to listen to. The music is displayed by album cover, which makes swiping to find what you want to listen to a breeze.

There are, however, a

couple of things that I hope get sorted in the next update. First off, it's still not possible to use my iPhone's voice control function with the system, which means scrolling through a long list of names if I want to make a phone call. I try not to make calls when driving, but if need be it's useful not to have to take my eyes off the road for too long.

The other area that could do with some work is the need to go back to the main menu to change functions. It requires the user to take his hands off the wheel and eyes off the road for too long. For example, switching from the trip computer or rev counter back to the sat-nav screen involves pressing a number of icons.

Sort these niggles out and I wouldn't be able to find fault with system. What's even more impressive is that it's free. **matthew.burrow@haymarket.com**

DEALS

Bargain new
and used motors

Throwing fuel on the fire

The petrol versus diesel debate doesn't only apply to new cars. **James Ruppert** fights his corner

When it comes to the used car market, I don't pay much attention to the 'official' industry line on anything. Instead, I listen to you. And the burning question in the emails I've been getting lately is: "Should I buy diesel or petrol?"

This is an ongoing issue and won't go away until there is an official answer via the fuel tax system. In the meantime, please let me make it clear that if you are buying a used car and don't do that many miles – say, around 10,000 a year – then you might as well buy petrol.

Before I replied to a reader, I looked out of the window and noted that the four cars on my drive were all petrol, while the quite old one in the garage was also petrol-powered. I really don't need

diesel in my life and, depending on the circumstances, neither do you.

Now, I know that 85mpg is all very impressive, but you will have to spend a substantial amount of money to enjoy that level of fuel economy. Used cars don't have to be dirt cheap, but the most singular appeal is that they dial out the most expensive motoring cost of all: depreciation. The second biggest cost is fuel, unless you have a major engine breakdown, which will take you back to square one. So although you can get lucky with a high-mileage diesel, I get rather frightened by the associated particulate filters, turbos and dual-mass flywheel clutches, never mind all those injectors that have to be replaced.

Our reader wasn't looking for

Toyota Avensis is dull but dependable

anything complicated, either; he just wanted a sensible family car to do a solid few thousand miles each year without breaking down. His budget meant he was in the market for relatively recent 100,000-mile motors. So petrol it was.

The shortlist included a Vauxhall Insignia or a Honda Accord, and I unadventurously suggested a Ford Mondeo or Toyota Avensis. So with £5000 to spend – my projected average

I know 85mpg is impressive, but you have to spend a substantial amount of money to enjoy that level of economy

P66 James Rupert
Used car expert

P68 Mark Pearson
Deals expert

P70 Nic Cackett
Data expert

A Honda Accord 2.0i EX for £5000 is a great used buy

for a decent used buy – the options are a 40,000-mile 2009 Insignia 1.8 16V SE, a 2008 Accord 2.0i EX with 69,000 miles, a 60,000-mile 2008 Mondeo 2.0 Zetec or a 2009 Avensis 1.8 V-Matic TR with 74,000 miles.

The Avensis was interesting because it was the latest shape. And you can never rule out the Mondeo, which is consistently a lot of car for the money. However, the Insignia seemed to me like the pick of the bunch on sheer value. Our reader, though, is poised to dive into an Accord – the most sensible thing to do. It's not only classy but also shouldn't give the owner any sleepless nights. In fact, none of those models should, and 99% of the reason for that is because they are run-in petrols. So buy them.

BANGERNOMICS BEST BUYS

READER'S CAR: FORD FOCUS ESTATE

Piers Couzens has recently sold this Ford Focus Estate, which had served him well.

"I bought my 2004 Focus TDCi Ghia Estate for an admittedly bargain £600," he says. "Having added 20,000 miles to it over 18 months, it has eaten a handbrake cable and two tyres and had one service. I just sold it for £800, so I can't really say it owed me a penny."

"I'm hoping the one-owner, full-history BMW E36 320i I've replaced it with proves to be as good a buy."

SEND YOUR BANGERNOMICS TALES TO JAMES

WHAT CAUGHT MY EYE THIS WEEK: RUSTY RIP-OFFS

Beware adverts on the interweb that claim to be selling an old car but really all they're offering is a piece of paper and some rust. That should be illegal. Don't encourage them.

USED CAR DILEMMA: DAIHATSU YRV

Daihatsu was a reassuringly bonkers company that took Toyota hardware and made it more interesting. Take the YRV, for example. A turbo, go-faster graphics and twin exhausts made this mini-MPV tacky and rather wonderful.

Old-school
Yaris

With
personality

Great British eccentrics

The United Kingdom has spawned countless quirky, oddball and off-the-wall cars, many of which make for surprisingly decent used buys. **Mark Pearson** chooses his favourites

1 Light Car Company Rocket (1991-1998)

Forget the McLaren F1 – the Rocket was Gordon Murray's finest hour. Masterminded and built by former racer Chris Craft and designed by Murray, the LCC Rocket was a blisteringly quick open funster that looked and went like a 1960s F1 car.

With a mid-mounted 143bhp 1.0-litre Yamaha motorcycle engine and a five-speed sequential

gearbox, it hit 60mph in less than four seconds. It weighed just 370kg, so it went like stink and held the road like glue. Despite appearances, it's a two-seater, with the passenger seated behind the driver.

Fewer than 50 were made, so, if you can find one, prices will be high. But you'll have a great investment and a staggeringly good car.

2

Reliant Scimitar SS1 (1984-1990)

Fancy a diminutive drop-top that's guaranteed to stand out from the crowd? A Scimitar SS1 could be for you.

Saddled at launch with some rather weedy Ford engines, it soon acquired a more powerful 135bhp 1.8-litre turbo unit from Nissan. Top speed was 126mph and, according to our sister mag What Car?, 0-60mph took just 6.6sec. It had

a glassfibre body with easily removable panels, and, thanks to independent suspension all round and a 50/50 weight distribution, it handled pretty well.

In the end it proved a little too fragile, though, and its Michelotti styling a little too divisive, so only 1500 were made. You can buy a wreck for a few hundred pounds and good ones from around £2k.

AC Ace (1993-2000)

This handsome and well-proportioned roadster was conceived during one of the many rebirths in AC's chequered history.

After a long gestation, the first versions emerged using a 260bhp 4.9-litre V8 from the Ford Mustang. Top speed was 140mph and it could see off 0-60mph in 5.9sec. The Ace was low and wide, too, with a stiff chassis and

double wishbones all round. As a result, cornering was unexpectedly good, with superb brakes and an excellent ride.

However, despite updates and some new engine options, strong opposition trumped the Ace and only 58 were made before they called it a day. Take a gamble on one now for around £30k, if you can find one. Prices should only go one way.

4

Midas (1978-present)

The Midas evolved from the 1960s Mini Marcos, an adaptable and fun kit car based on the original Mini.

With a slippery body made of glass-reinforced plastic, the Midas was lighter and stronger than the donor Mini on which it was based (usually a 1275 GT) and arguably better looking. Dynamics were good, too, and that A-Series engine

could be tuned to your heart's content.

In time it got aerodynamic tweaks from one Gordon Murray, uprated Metro underpinnings and even a decent convertible version. Indeed, the Midas seemed on the verge of greatness when a factory fire ruined all its future plans.

However, it's still possible to buy one new in kit form, and old ones start at £2k.

Bristol Brigand (1982-1993)

If an Aston is too common and a Bentley too predictable, consider a Bristol.

The lovingly hand-made Brigand packed a turbocharged 5.9-litre V8 under its bonnet. Gentlemen, it turns out, do not discuss power outputs, but there was enough oomph to whisk this opulent four-seater from 0-60mph in less than six seconds. It was also

surprisingly nimble, while both steering and ride were top notch.

Owning a Bristol brings instant dinner party superiority; the firm never made more than three a week and seldom advertised, so no one really knows what they are. If you see one for less than £30k, buy first and ask questions later. Oh, and they last for ever.

Autocar's star ratings explained

- ☆☆☆☆☆ **0-20%** Inherently dangerous/unsafe. Tragically, irredeemably flawed.
- ☆☆☆☆☆ **20-35%** Appalling. Massively significant failings.
- ☆☆☆☆☆ **35-50%** Very poor. Fails to meet any accepted class boundaries.
- ☆☆☆☆☆ **50-60%** Poor. Within acceptable class boundaries in a few areas. Still not recommendable.
- ☆☆☆☆☆ **60-65%** Off the pace. Below average in nearly all areas.
- ☆☆☆☆☆ **65-70%** Acceptable. About average in key areas, but disappoints.
- ☆☆☆☆☆ **70-75%** Competent. Above average in some areas, average in others. Outstanding in none.
- ☆☆☆☆☆ **75-80%** Good. Competitive in key areas.
- ☆☆☆☆☆ **80-85%** Very good. Very competitive in key areas, competitive in secondary respects.
- ☆☆☆☆☆ **85-92%** Excellent. Near class leading in key areas, and in some ways outstanding.
- ☆☆☆☆☆ **>93%** Brilliant, unsurpassed. All but flawless.

AUTOCAR TOP FIVES

Large SUVs

- 1 Range Rover Sport** From £60,000
Now bigger and better. A cut-price Range Rover rather than a jumped-up Discovery – and the best here by a mile. ★★★★★

- 2 Porsche Cayenne** From £50,000
The current model is more agile, more stylish and more sporty-feeling than before. A great interior, too. ★★★★★

- 3 BMW X5** From £43,000
Remains an accomplished and luxurious product. Trumped by others in the driving department now, though. ★★★★★

- 4 Land Rover Discovery** From £40,000
Looks like an outmoded hulk in this list, but it can still do everything you'd ever want it to. Seven seats, too. ★★★★★

- 5 Volkswagen Touareg** From £42,000
VW's biggest SUV is a well-balanced blend of solid dynamics, good price and usable, comfortable interior. ★★★★★

AUTOCAR TOP FIVES

Super-GTs

1 Ferrari F12 Berlinetta From £240,000
Thrilling in a way that only a front-engined V12 Ferrari could be. Crushing performance and unparalleled drama. ★★★★★

2 Aston Martin Vanquish From £190,000
If your money is only intended to buy dazzling exterior beauty, it is best invested in Aston Martin's flagship. ★★★★★

3 Bentley Continental GT V8 From £140,000
It may have lost four cylinders, but the new Audi-sourced V8 is so good that it completely reinvigorates the Conti. ★★★★★

4 Ferrari FF From £227,000
A mighty engine, and the drivetrain to handle it. Not the purist's Ferrari by definition – but a more usable one for it. ★★★★★

5 Mercedes S63 AMG Coupé From £125,000
So long in the legs that continents flash by mid-stride. Has a business-like opulence. Not as evocative as some. ★★★★★

Exceptional opportunity...

An exciting opportunity to purchase a very rare full set of 4 number plates. Never before has there been an occasion to have all of your private or business fleet with matching numbers. Whether you simply want a plate that is private and exclusive or be the fortunate one to whom share these initials, no matter which this is an opportunity not to be missed.

This is the perfect time to start an investment portfolio of plates...

Citroën lights up the Eiffel Tower

4 July 1925

André Citroën wasn't shy about making grand statements to publicise his burgeoning car brand, which he established in 1919. In 1922 he arranged for an aeroplane to write 'Citroën' in the sky above Paris ahead of the opening of the seventh motor show in the French capital.

Three years later he went even better, renting the Eiffel Tower and arranging for a spectacular light show promoting his company – which was based at a factory just along the Seine – to adorn it.

The display was part of the 1925 Paris Expo. It was a significant event in the advancement of the art deco movement; the whole of the city centre was made part of the show and major landmarks were illuminated at night. Citroën's display – which consisted of 250,000 bulbs and 370 miles of wiring – was appraised by Autocar.

"A new attraction to the night scenes in Paris has now been provided by Monsieur André Citroën," our correspondent wrote. "In order further to bring his cars before the public, he has rented three sides of the Eiffel Tower, which is brilliantly illuminated by night with

'This may fairly be described as the most remarkable and complete flashing advertising sign yet created'

electrically lit letters each 92 feet high. At first the tower is outlined in luminous lines and then a certain number of small stars and five or six bigger ones with the tail of a comet are seen. At the same time, bright flames shooting skyward appear at the top of the tower.

"As the tails of the comets gradually lengthen to form letters making up the word 'Citroën', two signs, red and blue in colour, bearing the dates 1889-1925, the former the date of the tower's creation, become luminous, and are almost immediately replaced by the double chevrons which are the Citroën trademark. This may fairly be described

as the most remarkable and complete flashing advertising sign yet created."

At that time Citroën Cars Ltd, the UK importer, was based in Hammersmith, London, with a West End showroom in Piccadilly. The manufacturer was a regular and prominent advertiser in Autocar, highlighting its 11.4hp three-seat Cloverleaf and similarly powered English Body four-seater.

Citroën's adverts majored on the manufacturer's "luxury of equipment", stating that "reliability, economy and comfort are taken-for-granted features of all Citroën models". These ads were replaced in subsequent issues by ones featuring the Eiffel Tower.

The illumination became a fixture of Parisien life, remaining on the iconic landmark until 1934. Charles Lindbergh, the first man to fly across the Atlantic, is said to have used the sign to guide him towards Le Bourget Airport as he came in to land in 1927.

André Citroën died in 1935, but by that time the car company had encountered financial difficulties, resulting in the lights being taken down from the tower.
